

1 Amend Section 239 – Water Pollution Control to read as follows:

2
3 **"SECTION 209 - TEMPORARY WATER POLLUTION, DUST, AND EROSION**
4 **CONTROL**

5
6 **209.01 Description.** This section describes the following:

7
8 (A) Including detailed plans, diagrams, and written site-specific best
9 management practices (BMP); constructing, maintaining, and repairing
10 temporary water pollution, dust, and erosion control measures at the project
11 site, including local material sources, work areas and haul roads; removing
12 and disposing hazardous wastes; control of fugitive dust (defined as
13 uncontrolled emission of solid airborne particulate matter from any source
14 other than combustion); and complying with applicable State and Federal
15 permit conditions.

16
17 (B) Work associated with dewatering activities and complying with
18 conditions of the National Pollutant Discharge Elimination System (NPDES)
19 general permit coverage authorizing discharges associated with construction
20 activity dewatering.

21
22 Requirements of this section also apply to borrow pit operations, haul
23 roads and Contractor's storage sites located outside State Right-of-Way.

24
25 **209.02 Materials.** Materials shall conform to the following:

26
27 (A) **Slope Drains.** Slope drains may be constructed of pipe, fiber,
28 mats, erosion control fabric, geotextiles, rubble, portland cement concrete,
29 bituminous concrete, plastic sheets, or other materials acceptable to
30 Engineer.

31
32 (B) **Mulches.** Mulches shall be recycled materials include bagasse,
33 hay, straw, wood cellulose, bark, wood chips, or other materials
34 acceptable to Engineer. Mulches shall be clean and free of noxious weeds
35 and deleterious materials.

36
37 (C) **Grass.** Grass shall be a quick growing species such as rye grass,
38 Italian rye grass, or cereal grasses. Grass shall be suitable to the area
39 and provide a temporary cover that will not compete later with permanent
40 cover. Alternative grasses are allowable if acceptable to Engineer.

41
42 (D) **Fertilizer and Soil Conditioners.** Fertilizer and soil conditioners
43 shall be a standard commercial grade acceptable to the Engineer.
44 Fertilizer shall conform to Subsection 712.18(A) - Commercial Fertilizer.

45
46 (E) **Hydro-mulching.** Hydro-mulching used as a BMP shall consist of
47 materials in Subsections 209.02(B) - Mulches, 209.02(C) - Grass, and

209.02(D) –Fertilizer and Soil conditioners, with potable water meeting the requirements of Subsection 712.01 - Water. Installation and other requirements shall in accordance with portions of Section 641- Hydro-Mulch Seeding.

(F) Silt Fences. Silt fences shall be synthetic filter fabric mounted on posts and embedded in compacted ground in accordance with contract documents, and shall be in compliance with ASTM D6462, Standard Practice for Silt Fence Installation.

(G) Berms. Berms shall be gravel or sand wrapped with geotextile material. Alternate materials are allowable if acceptable to Engineer.

Alternative materials or methods to control, prevent, remove and dispose pollution are allowable if acceptable to Engineer.

209.03 Construction.

(A) Preconstruction Requirements.

(1) Water Pollution, Dust, and Erosion Control Meeting. Submit site specific BMP to Engineer. Schedule a water pollution, dust, and erosion control meeting with Engineer after site specific BMP is accepted in writing by Engineer. Meeting shall be scheduled 14 days before start of construction work. Discuss sequence of work, plans and proposals for water pollution, dust, and erosion control.

(2) Water Pollution, Dust, and Erosion Control Submittals. Submit the following:

(a) Written site-specific BMP describing activities to minimize water pollution and soil erosion into State waters, drainage or sewer systems. BMP shall include the following:

1. An identification of potential pollutants and their sources.
2. A list of all materials and heavy equipment to be used during construction.
3. Descriptions of the methods and devices used to minimize the discharge of pollutants into State waters, drainage or sewer systems.
4. Details of the procedures used for the maintenance and subsequent removal of any erosion or

siltation control devices.

5. Methods of removing and disposing hazardous wastes encountered or generated during construction.

6. Methods of removing and disposing concrete and asphalt pavement cutting slurry, concrete curing water, and hydrodemolition water.

7. Spill control.

8. Fugitive dust control, including dust from grinding operations.

9. Methods of storing and handling of oils, paints and other products used for the project.

10. Material storage and handling areas, and other staging areas.

11. Concrete truck washouts.

12. Concrete waste control.

13. Fueling and maintenance of vehicles and other equipment.

14. Tracking of sediment offsite from project entries and exits.

15. Litter management.

16. Toilet facilities.

17. Other factors that may cause water pollution, dust and erosion control.

(b) Provide plans indicating location of water pollution, dust and erosion control devices; provide plans and details of BMPs to be installed or utilized; show areas of soil disturbance in cut and fill, indicate areas used for storage of aggregate (indicate type of aggregate), asphalt cold mix, soil or waste, and show areas where vegetative practices are to be implemented. Indicate intended drainage pattern on plans.

Include separate drawing for each phase of construction that alters drainage patterns. Indicate approximate date when device will be installed and removed.

142
143 (c) Construction schedule.
144

145 (d) Name(s) of specific individual(s) designated responsible
146 for water pollution, dust, and erosion controls on the project
147 site. Include home and business telephone numbers, fax
148 numbers, and e-mail addresses.
149

150 (e) Description of fill material to be used.
151

152 Date and sign BMP. Keep accepted copy on site
153 throughout duration of the project. Revisions to the BMP
154 shall be included with original BMP. Modify contract
155 documents to conform to revisions. Include actual date of
156 installation and removal of BMP. Obtain written acceptance
157 by Engineer before revising BMP.
158

159 Follow guidelines in the "Best Management Practices
160 Manual for Construction Sites in Honolulu", in developing,
161 installing, and maintaining BMPs for all projects. Follow
162 Honolulu's City and County "Rules for Soil Erosion Standards
163 and Guidelines" for all projects on Oahu. Use respective Soil
164 Erosion Guidelines for Maui, Kauai, and Hawaii projects.
165

166 **(B) Construction Requirements.** Do not begin work until submittals
167 detailed in Subsection 209.03(A)(2) - Water Pollution, Dust, and Erosion
168 Control Submittals are completed and accepted in writing by Engineer.
169

170 Install, maintain, monitor, repair and replace site-specific BMP
171 measures, such as for water pollution, dust and erosion control;
172 installation, monitoring, and operation of hydrotesting activities; removal
173 and disposal of hazardous waste indicated on plans, concrete cutting slurry,
174 concrete curing water; or hydrodemolition water.
175

176 Furnish, install rain gage in a secure location for projects that require
177 NPDES permit from the Department of Health prior to field work including
178 installation of site-specific BMP. Provide rain gage with a tolerance of at
179 least 0.05 inches of rainfall, and an opening of at least 1-inch diameter.
180 Install rain gage on project site in an area that will not deter rainfall from
181 entering the gate opening. Maintain rain gage and replace rain gage that is
182 stolen, does not function properly or accurately, is worn out, or needs to be
183 relocated. Do not begin field work until rain gauge is installed and site
184 specific BMPs are in place. Do not begin field work until rain gauge is
185 installed and site specific BMPs are in place.
186

187 Address all comments received from Engineer.
188
189

189 Modify and resubmit plans and construction schedules to correct
190 conditions that develop during construction which were unforeseen during
191 the design and pre-construction stages.

192
193 Coordinate temporary control provisions with permanent control
194 features throughout the construction and post-construction period.

195
196 Limit maximum surface area of earth material exposed at any time to
197 300,000 square feet. Do not expose or disturb surface area of earth
198 material (including clearing and grubbing) until BMP measures are installed
199 and accepted in writing by Engineer. Protect temporarily or permanently
200 disturbed soil surface from rainfall impact, runoff and wind before end of
201 workday.

202
203 Protect exposed or disturbed surface area with mulches, grass seeds
204 or hydromulch. Spray mulches at a rate of 2,000 pounds per acre. Add
205 tackifier to mix at a rate of 85 pounds per acre. Apply grass seeds at a rate
206 of 125 pounds per acre. For hydromulch use the ingredients and rates
207 required for mulches and grass seeds.

208
209 Apply fertilizer to mulches, grass seed or hydromulch at a rate of 450
210 pounds per acre. Apply an additional 250 pounds per acre every 90
211 calendar days.

212
213 Install velocity dissipation measures when exposing erodible surfaces
214 greater than 15 feet in height.

215
216 BMP measures shall be in place and operational (such as shaping the
217 earthwork to control and directing the runoff) at the end of workday.
218 Shaping earthwork may include constructing earth berms along the top
219 edges of embankments if acceptable to Engineer.

220
221 Install and maintain either or both stabilized construction entrances
222 and wheel washes to minimize tracking of dirt and mud onto roadways.
223 Restrict traffic to stabilized construction areas only. Clean dirt, mud, or
224 other material tracked onto the road immediately. Modify stabilized
225 construction entrances to prevent mud from being tracked onto road.
226 Stabilize entire access roads if necessary.

227
228 Chemicals may be used as soil stabilizers for either or both erosion
229 and dust control if acceptable to Engineer.

230
231 Provide temporary slope drains of rigid or flexible conduits to carry
232 runoff from cuts and embankments. Provide portable flume at the
233 entrance. Shorten or extend temporary slope drains to ensure proper
234 function.

236 Protect ditches, channels, and other drainageways leading away
237 from cuts and fills at all times by either:
238

239 (1) Hydro-mulching the lower region of embankments in the
240 immediate area.

241
242 (2) Placing an 8- to 15-inch layer of excavated rock, if available
243 on-site, without reducing the cross section of the drainageway.
244 Rocks shall be less than 4 inches in diameter.
245

246 (3) Installing check dams and salutation control devices.
247

248 (4) Other methods acceptable to Engineer.
249

250 Provide for controlled discharge of waters impounded, directed, or
251 controlled by project activities or erosion control measures.
252

253 Cover exposed surface of materials completely with tarpaulin or
254 similar device when transporting aggregate, soil, excavated material or
255 material that may be source of fugitive dust.
256

257 Cleanup and remove any pollutant that can be attributed to
258 Contractor.
259

260 Install or modify BMP measures due to change in Contractor's means
261 and methods, or for omitted condition that should have been allowed for in
262 the accepted site specific BMP or a BMP that replaces an accepted site
263 specific BMP that is not satisfactorily performing.
264

265 Properly maintain all BMP features. Inspect, prepare a written
266 report, and make repairs to BMP measures at following intervals:
267

268 (1) Weekly during dry periods.
269

270 (2) Within 24 hours of any rainfall of 0.5 inch or greater which
271 occurs in a 24-hour period.
272

273 (3) Daily during periods of prolonged rainfall.
274

275 (4) When existing erosion control measures are damaged or not
276 operating properly as required by site specific BMP.
277

278 Remove, destroy, replace or relocate any BMP that must be removed,
279 destroyed, replaced or relocated due to potential or actual flooding, or
280 potential danger or damage to project or public.
281

282 Maintain records of inspections of BMP work. Keep continuous

records for duration of the project. Submit weekly copy of records to Engineer.

In addition to weekly reports, submit to Engineer all amounts spent initializing and maintaining BMP during previous week. Amount spent includes, but is not limited to: purchases of erosion control material, construction of storage areas, and installation of water pollution, erosion and dust control measures. Submit report weekly along with site inspection report.

Protect finished and previously seeded areas from damage and from spillover materials placed in upper lifts of embankment.

The Contractor's designated representative specified in Subsection 209.03(A)(2)(d) shall address any BMP concerns brought up by Engineer within 24 hours of notification, including weekends and holidays. Failure to satisfactorily address these concerns, Engineer reserves the right to employ outside assistance or use Engineer's own labor forces to provide necessary corrective measures. Engineer will charge Contractor such incurred costs plus any associated project engineering costs. Engineer will make appropriate deductions from Contractor's monthly progress estimate.

Failure to apply BMP measures shall result in either or both the establishment and increase in the amount of retainage due to unsatisfactory progress or withholding of monthly progress payment. Continued failure to apply BMP measures may result in one or more of the following: assessment of liquidated damages, suspension, or cancellation of contract with Contractor being fully responsible for all additional costs incurred by State.

(C) Hydrotesting Activities. If work includes removing, relocation or installing waterlines, and Contractor elects to flush waterline or discharge hydrotesting effluent into State waters or drainage systems, obtain an NPDES Hydrotesting Waters Permit from Department of Health, Clean Water Branch (DOH-CWB).

Do not begin hydrotesting activities until the DOH-CWB has issued a Notice of General Permit Coverage (NGPC). Hydrotesting operations shall be in accordance with conditions in NGPC. Submit a copy of the NPDES Hydrotesting Waters Application and Permit to Engineer.

(D) Dewatering Activities. If excavation of backfilling operations require dewatering, and Contractor elects to discharge dewatering effluent into State waters or existing drainage systems, obtain NPDES General Permit Coverage authorizing discharges associated with construction activity

327 dewatering from Department of Health, Clean Water Branch (DOH-CWB).
328 If permit is required, prepare and submit permit application (CWB-NOI Form
329 G) to DOH-CWB.
330

331 Do not begin dewatering activities until DOH-CWB has issued Notice
332 of General Permit Coverage (NGPC). Conduct dewatering operations in
333 accordance with conditions in NGPC. Submit copy of NPDES Hydrotesting
334 Waters Application and Permit to Engineer.
335

336 **209.04 Measurement.**
337

338 (A) Installation, maintenance, monitoring, and removal of BMP will be paid
339 on a lump sum basis. Measurement for payment will not apply.
340

341 (B) Engineer will only measure additional water pollution, dust and erosion
342 control required and requested by Engineer on a force account basis in
343 accordance with Subsection 109.04 – Payment for Additional and Force
344 Account Work.
345

346 **209.05 Payment.** Engineer will pay for accepted pay items listed below at
347 contract price per pay unit, as shown in the proposal schedule. Payment will be full
348 compensation for work prescribed in this section and contract documents.
349

350 Engineer will pay for each of the following pay items when included in
351 proposal schedule:
352

353 Pay Item	354 Pay Unit
355 Installation, Maintenance, Monitoring, and Removal of BMP	356 Lump Sum
357 Additional Water Pollution, Dust, and Erosion Control	358 Force Account

359 An estimated amount for force account is allocated in proposal schedule
360 under 'Additional Water Pollution, Dust, and Erosion Control', but actual amount to
361 be paid will be the sum shown on accepted force account records, whether this
362 sum be more or less than estimated amount allocated in proposal schedule.
363 Engineer will pay for BMP measures requested by Engineer that are beyond scope
364 of accepted site specific BMP and for litter management due to rubbish created by
365 the public on a force account basis.
366

367 No progress payment will be authorized until Engineer accepts in writing site-
368 specific BMP or when Contractor fails to maintain project site in accordance with
369 accepted BMP.
370

371 For all citations or fines received by the Department for non-compliance with
372 Notice of General Permit Coverage (NGPC), the Contractor shall reimburse State
373

373 within 30 days for full amount of outstanding cost State has incurred, or Engineer
374 will deduct cost from progress payment.

375

376 Engineer will assess liquidated damages up to \$27,500 per day for non-
377 compliance of each BMP requirement and all other requirements in this section."

378

379

380

END OF SECTION 209
