

**Attachment A-6**  
**Specifications for Temporary Water  
Pollution, Dust and Erosion Control**

**SECTION 209 - TEMPORARY WATER POLLUTION, DUST, AND EROSION  
CONTROL**

**209.01 Description.** This section describes the following:

(A) Including detailed plans, diagrams, and written site-specific best management practices (BMP); constructing, maintaining, and repairing temporary water pollution, dust, and erosion control measures at the project site, including local material sources, work areas and haul roads; removing and disposing hazardous wastes; control of fugitive dust (defined as uncontrolled emission of solid airborne particulate matter from any source other than combustion); and complying with applicable State and Federal permit conditions.

(B) Work associated with dewatering activities and complying with conditions of the National Pollutant Discharge Elimination System (NPDES) general permit coverage authorizing discharges associated with construction activity dewatering.

Requirements of this section also apply to borrow pit operations, haul roads and Contractor's storage sites located outside State Right-of-Way.

**209.02 Materials.** Materials shall conform to the following:

(A) **Slope Drains.** Slope drains may be constructed of pipe, fiber, mats, erosion control fabric, geotextiles, rubble, portland cement concrete, bituminous concrete, plastic sheets, or other materials acceptable to Engineer.

(B) **Mulches.** Mulches shall be recycled materials include bagasse, hay, straw, wood cellulose, bark, wood chips, or other materials acceptable to Engineer. Mulches shall be clean and free of noxious weeds and deleterious materials.

(C) **Grass.** Grass shall be a quick growing species such as rye grass, Italian rye grass, or cereal grasses. Grass shall be suitable to the area and provide a temporary cover that will not compete later with permanent cover. Alternative grasses are allowable if acceptable to Engineer.

(D) **Fertilizer and Soil Conditioners.** Fertilizer and soil conditioners shall be a standard commercial grade acceptable to the Engineer. Fertilizer shall conform to Subsection 619.02(H)(1) - Commercial Fertilizer.

(E) **Hydro-mulching.** Hydro-mulching used as a BMP shall consist of materials in Subsections 209.02(B) - Mulches, 209.02(C) - Grass, and 209.02(D) - Fertilizer and Soil conditioners, with potable water meeting the

## 209.02

requirements of Subsection 712.01 - Water. Installation and other requirements shall in accordance with portions of Section 641- Hydro-Mulch Seeding.

**(F) Silt Fences.** Silt fences shall be synthetic filter fabric mounted on posts and embedded in compacted ground in accordance with contract documents, and shall be in compliance with ASTM D6462, Standard Practice for Silt Fence Installation.

**(G) Berms.** Berms shall be gravel or sand wrapped with geotextile material. Alternate materials are allowable if acceptable to Engineer.

Alternative materials or methods to control, prevent, remove and dispose pollution are allowable if acceptable to Engineer.

## 209.03 Construction.

### **(A) Preconstruction Requirements.**

**(1) Water Pollution, Dust, and Erosion Control Meeting.** Submit site specific BMP to Engineer. Schedule a water pollution, dust, and erosion control meeting with Engineer after site specific BMP is accepted in writing by Engineer. Meeting shall be scheduled 14 days before start of construction work. Discuss sequence of work, plans and proposals for water pollution, dust, and erosion control.

**(2) Water Pollution, Dust, and Erosion Control Submittals.** Submit the following:

**(a)** Written site-specific BMP describing activities to minimize water pollution and soil erosion into State waters, drainage or sewer systems. BMP shall include the following:

1. An identification of potential pollutants and their sources.
2. A list of all materials and heavy equipment to be used during construction.
3. Descriptions of the methods and devices used to minimize the discharge of pollutants into State waters, drainage or sewer systems.
4. Details of the procedures used for the maintenance and subsequent removal of any erosion or siltation control devices.

5. Methods of removing and disposing hazardous wastes encountered or generated during construction.
  6. Methods of removing and disposing concrete and asphalt pavement cutting slurry, concrete curing water, and hydrodemolition water.
  7. Spill control.
  8. Fugitive dust control, including dust from grinding, sweeping, or brooming off operations or combination thereof.
  9. Methods of storing and handling of oils, paints and other products used for the project.
  10. Material storage and handling areas, and other staging areas.
  11. Concrete truck washouts.
  12. Concrete waste control.
  13. Fueling and maintenance of vehicles and other equipment.
  14. Tracking of sediment offsite from project entries and exits.
  15. Litter management.
  16. Toilet facilities.
  17. Other factors that may cause water pollution, dust and erosion control.
- (b) Provide plans indicating location of water pollution, dust and erosion control devices; provide plans and details of BMPs to be installed or utilized; show areas of soil disturbance in cut and fill, indicate areas used for storage of aggregate (indicate type of aggregate), asphalt cold mix, soil or waste, and show areas where vegetative practices are to be implemented. Indicate intended drainage pattern on plans. Include separate drawing for each phase of construction that alters drainage patterns. Indicate approximate date when device will be installed and removed.

### 209.03

- 142 (c) Construction schedule.  
143  
144 (d) Name(s) of specific individual(s) designated responsible  
145 for water pollution, dust, and erosion controls on the project  
146 site. Include home and business telephone numbers, fax  
147 numbers, and e-mail addresses.  
148  
149 (e) Description of fill material to be used.  
150  
151 Date and sign BMP. Keep accepted copy on site  
152 throughout duration of the project. Revisions to the BMP shall  
153 be included with original BMP. Modify contract documents to  
154 conform to revisions. Include actual date of installation and  
155 removal of BMP. Obtain written acceptance by Engineer  
156 before revising BMP.  
157  
158 Effective October 1, 2008, follow guidelines in the  
159 "Construction Best Management Practices Field Manual" dated  
160 January 2008, in developing, installing, and maintaining BMPs  
161 for all projects. Follow Honolulu's City and County "Rules for  
162 Soil Erosion Standards and Guidelines" for all projects on  
163 Oahu. Use respective Soil Erosion Guidelines for Maui, Kauai  
164 and Hawaii projects.  
165  
166 **(B) Construction Requirements.** Do not begin work until submittals  
167 detailed in Subsection 209.03(A)(2) - Water Pollution, Dust, and Erosion  
168 Control Submittals are completed and accepted in writing by Engineer.  
169  
170 Install, maintain, monitor, repair and replace site-specific BMP  
171 measures, such as for water pollution, dust and erosion control; installation,  
172 monitoring, and operation of hydrotesting activities; removal and disposal of  
173 hazardous waste indicated on plans, concrete cutting slurry, concrete curing  
174 water; or hydrodemolition water.  
175  
176 Furnish, install rain gage in a secure location for projects that require  
177 NPDES permit from the Department of Health prior to field work including  
178 installation of site-specific BMP. Provide rain gage with a tolerance of at  
179 least 0.05 inches of rainfall, and an opening of at least 1-inch diameter.  
180 Install rain gage on project site in an area that will not deter rainfall from  
181 entering the gate opening. Maintain rain gage and replace rain gage that is  
182 stolen, does not function properly or accurately, is worn out, or needs to be  
183 relocated. Do not begin field work until rain gauge is installed and site  
184 specific BMPs are in place. Do not begin field work until rain gauge is  
185 installed and site specific BMPs are in place.  
186  
187 Address all comments received from Engineer.  
188

189           Modify and resubmit plans and construction schedules to correct  
190 conditions that develop during construction which were unforeseen during the  
191 design and pre-construction stages.

192  
193           Coordinate temporary control provisions with permanent control  
194 features throughout the construction and post-construction period.

195  
196           Limit maximum surface area of earth material exposed at any time to  
197 300,000 square feet. Do not expose or disturb surface area of earth material  
198 (including clearing and grubbing) until BMP measures are installed and  
199 accepted in writing by Engineer. Protect temporarily or permanently  
200 disturbed soil surface from rainfall impact, runoff and wind before end of  
201 workday.

202  
203           Protect exposed or disturbed surface area with mulches, grass seeds  
204 or hydromulch. Spray mulches at a rate of 2,000 pounds per acre. Add  
205 tackifier to mix at a rate of 85 pounds per acre. Apply grass seeds at a rate  
206 of 125 pounds per acre. For hydromulch use the ingredients and rates  
207 required for mulches and grass seeds.

208  
209           Apply fertilizer to mulches, grass seed or hydromulch at a rate of 450  
210 pounds per acre. Apply an additional 250 pounds per acre every 90 calendar  
211 days.

212  
213           Install velocity dissipation measures when exposing erodible surfaces  
214 greater than 15 feet in height.

215  
216           BMP measures shall be in place and operational (such as shaping the  
217 earthwork to control and directing the runoff) at the end of workday. Shaping  
218 earthwork may include constructing earth berms along the top edges of  
219 embankments if acceptable to Engineer.

220  
221           Install and maintain either or both stabilized construction entrances  
222 and wheel washes to minimize tracking of dirt and mud onto roadways.  
223 Restrict traffic to stabilized construction areas only. Clean dirt, mud, or other  
224 material tracked onto the road immediately. Modify stabilized construction  
225 entrances to prevent mud from being tracked onto road. Stabilize entire  
226 access roads if necessary.

227  
228           Chemicals may be used as soil stabilizers for either or both erosion  
229 and dust control if acceptable to Engineer.

230  
231           Provide temporary slope drains of rigid or flexible conduits to carry  
232 runoff from cuts and embankments. Provide portable flume at the entrance.  
233 Shorten or extend temporary slope drains to ensure proper function.

234  
235           Protect ditches, channels, and other drainageways leading away from  
236 cuts and fills at all times by either:

279

(1) Hydro-mulching the lower region of embankments in the immediate area.

(2) Placing an 8- to 15-inch layer of excavated rock, if available on-site, without reducing the cross section of the drainageway. Rocks shall be less than four inches in diameter.

(3) Installing check dams and siltation control devices.

(4) Other methods acceptable to Engineer.

Provide for controlled discharge of waters impounded, directed, or controlled by project activities or erosion control measures.

Cover exposed surface of materials completely with tarpaulin or similar device when transporting aggregate, soil, excavated material or material that may be source of fugitive dust.

Cleanup and remove any pollutant that can be attributed to Contractor.

Install or modify BMP measures due to change in Contractor's means and methods, or for omitted condition that should have been allowed for in the accepted site specific BMP or a BMP that replaces an accepted site specific BMP that is not satisfactorily performing.

Properly maintain all BMP features. Inspect, prepare a written report, and make repairs to BMP measures at following intervals:

(1) Weekly during dry periods.

(2) Within 24 hours of any rainfall of 0.5 inch or greater which occurs in a 24-hour period.

(3) Daily during periods of prolonged rainfall.

(4) When existing erosion control measures are damaged or not operating properly as required by site specific BMP.

Remove, destroy, replace or relocate any BMP that must be removed, destroyed, replaced or relocated due to potential or actual flooding, or potential danger or damage to project or public.

280 Maintain records of inspections of BMP work. Keep continuous  
281 records for duration of the project. Submit weekly copy of records to  
282 Engineer.  
283

284 In addition to weekly reports, submit to Engineer all amounts spent  
285 initializing and maintaining BMP during previous week. Amount spent  
286 includes, but is not limited to: purchases of erosion control material,  
287 construction of storage areas, and installation of water pollution, erosion and  
288 dust control measures. Submit report weekly along with site inspection  
289 report.  
290

291 Protect finished and previously seeded areas from damage and from  
292 spillover materials placed in upper lifts of embankment.  
293

294 The Contractor's designated representative specified in Subsection  
295 209.03(A)(2)(d) shall address any BMP concerns brought up by Engineer  
296 within 24 hours of notification, including weekends and holidays. Failure to  
297 satisfactorily address these concerns, Engineer reserves the right to employ  
298 outside assistance or use Engineer's own labor forces to provide necessary  
299 corrective measures. Engineer will charge Contractor such incurred costs  
300 plus any associated project engineering costs. Engineer will make  
301 appropriate deductions from Contractor's monthly progress estimate. Failure  
302 to apply BMP measures shall result in either or both the establishment and  
303 increase in the amount of retainage due to unsatisfactory progress or  
304 withholding of monthly progress payment. Continued failure to apply BMP  
305 measures may result in one or more of the following: assessment of  
306 liquidated damages, suspension, or cancellation of Contract with Contractor  
307 being fully responsible for all additional costs incurred by State.  
308

309 **(C) Hydrotesting Activities.** If work includes removing, relocation or  
310 installing waterlines, and Contractor elects to flush waterline or discharge  
311 hydrotesting effluent into State waters or drainage systems, obtain an  
312 NPDES Hydrotesting Waters Permit from Department of Health, Clean Water  
313 Branch (DOH-CWB).  
314

315 Do not begin hydrotesting activities until the DOH-CWB has issued a  
316 Notice of General Permit Coverage (NGPC). Hydrotesting operations shall  
317 be in accordance with conditions in NGPC. Submit a copy of the NPDES  
318 Hydrotesting Waters Application and Permit to Engineer.  
319

320 **(D) Dewatering Activities.** If excavation of backfilling operations require  
321 dewatering, and Contractor elects to discharge dewatering effluent into State  
322 waters or existing drainage systems, obtain NPDES General Permit  
323 Coverage authorizing discharges associated with construction activity

### 209.03

324 dewatering from Department of Health, Clean Water Branch (DOH-CWB). If  
325 permit is required, prepare and submit permit application (CWB-NOI Form G)  
326 to DOH-CWB.

327

328 Do not begin dewatering activities until DOH-CWB has issued Notice  
329 of General Permit Coverage (NGPC). Conduct dewatering operations in  
330 accordance with conditions in NGPC. Submit copy of NPDES Hydrotesting  
331 Waters Application and Permit to Engineer.

332

### 333 209.04 Measurement.

334

335 (A) Installation, maintenance, monitoring, and removal of BMP will be paid  
336 on a lump sum basis. Measurement for payment will not apply.

337

338 (B) Engineer will only measure additional water pollution, dust and erosion  
339 control required and requested by Engineer on a force account basis in  
340 accordance with Subsection 109.06 – Force Account Provisions and  
341 Compensation.

342

343 209.05 Payment. Engineer will pay for accepted pay items listed below at  
344 contract price per pay unit, as shown in the proposal schedule. Payment will be full  
345 compensation for work prescribed in this section and contract documents.

346

347 Engineer will pay for each of the following pay items when included in  
348 proposal schedule:

349

350 Pay Item	351 Pay Unit
352 Installation, Maintenance, Monitoring, and Removal of BMP	353 Lump Sum
354 Additional Water Pollution, Dust, and Erosion Control	355 Force Account

356

357 An estimated amount for force account is allocated in proposal schedule  
358 under 'Additional Water Pollution, Dust, and Erosion Control', but actual amount to  
359 be paid will be the sum shown on accepted force account records, whether this sum  
360 be more or less than estimated amount allocated in proposal schedule. Engineer  
361 will pay for BMP measures requested by Engineer that are beyond scope of  
362 accepted site specific BMP and for litter management due to rubbish created by the  
363 public on a force account basis.

364

365 No progress payment will be authorized until Engineer accepts in writing site-  
366 specific BMP or when Contractor fails to maintain project site in accordance with  
367 accepted BMP.

368

369 For all citations or fines received by the Department for non-compliance with  
Notice of General Permit Coverage (NGPC), the Contractor shall reimburse State

370 within 30 days for full amount of outstanding cost State has incurred, or Engineer will  
371 deduct cost from progress payment.

372

373 Engineer will assess liquidated damages up to \$27,500 per day for non-  
374 compliance of each BMP requirement and all other requirements in this section.

375

376

377

**END OF SECTION 209**
