

**STATE OF HAWAII
DEPARTMENT OF TRANSPORTATION
HIGHWAYS DIVISION**

**ADDENDUM NO. 1
For
KAUMALAPAU HIGHWAY PAVEMENT PREVENTIVE MAINTENANCE
AIRPORT ROAD TO LANAI CITY
PROJECT NO. 440A-01-16M
DISTRICT OF LAHAINA
ISLAND OF LANAI**

The following amendments shall be made to the Bid Documents:

A. NOTICE TO BIDDERS

Prospective bidders are hereby notified that receiving of sealed proposals scheduled for 2:00 P.M., March 03, 2016 is HEREBY POSTPONED until 2:00 P.M., March 10, 2016. The attached NOTICE TO BIDDERS shall be incorporated and made a part of the NOTICE TO BIDDERS.

B. SPECIFICATIONS

1. Replace Table of Contents dated 7/6/15
with the Table of Contents dated 2/23/16
2. Add Section - 621 Enhanced Vehicle Classification
Traffic Counting System dated 2/23/2016

C. PROPOSAL SCHEDULE

1. Replace proposal schedule Pages P-11 to P-13 dated 1/15/2016 with
the attached Proposal schedule pages P-11 to P-13 dated 2/23/2016

D. PLANS

1. Replace plan Sheet #11 and Replace with plan Sheet # ADD.11
2. Replace plan Sheet #19 and Replace with plan Sheet # ADD.19
3. Add plan Sheet # ADD.19S-1
4. Add plan Sheet # ADD.19S-2
5. Replace plan Sheet #22 and Replace with plan Sheet # ADD.22

Addendum No. 1
Date: 2/25/2016

PRE-BID MEETING MINUTES is provided for information.

1. Meeting Minutes (attached)
2. Sign-in sheet (attached)
3. Questions & Answers / Clarifications (attached)

Please acknowledge receipt of this Addendum No. 1 by recording the date of its receipt in the space provided on page P-(x) of the Proposal.

FORD N. FUCHIGAMI
for Director of Transportation

NOTICE TO BIDDERS
(Chapter 103D, HRS)

The receiving of SEALED BIDS for KAUMALAPAU HIGHWAY PAVEMENT PREVENTIVE MAINTENANCE, AIRPORT ROAD TO LANAI CITY PROJECT NO. 440A-01-16M, DISTRICT OF LAHAINA, ISLAND OF LANAI, scheduled for 2:00 P.M., March 03, 2016, at the Contracts Office, Department of Transportation, 869 Punchbowl Street, Honolulu, Hawaii 96813, or at the Office of the District Engineer – Maui, 650 Palapala Drive, Kahului, Maui, 96732, is HEREBY POSTPONED until 2:00 P.M. March 10, 2016, at which time and places they will be publicly opened and read.

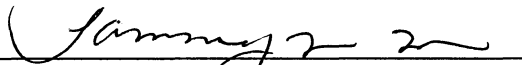

FORD N. FUCHIGAMI
for Director of Transportation

END OF TABLE OF CONTENTS

1 Make the following section a part of the Standard Specifications:
2
3

4 **SECTION 621 – ENHANCED VEHICLE CLASSIFICATION TRAFFIC COUNTING**
5 **SYSTEM**
6

7 **621.01 Description.** This work includes furnishing labor, materials, tools,
8 machinery, and equipment necessary to restore enhanced vehicle classification
9 traffic counting system (EVC System) complete in place according to the contract.
10 The Contractor shall make improvements as shown in the contract including the
11 following:
12

13 (A) Provide necessary provisions for traffic counting operations by
14 installing classifications sensors (piezoelectric sensors), vehicle detector
15 inductance loops (sensor loops) and cable wiring.
16

17 (B) Provide underground conduit systems including trench, structural
18 excavations, backfilling, and restoration work.
19

20 (C) Coordinate work and arrange for inspection of work with the Engineer.
21 Arrange for a representative from piezoelectric sensor's manufacturer to
22 supervise installation of piezoelectric sensors.
23

24 (D) Conduct required testing of the sensor loops and piezoelectric sensors.
25 Submit acceptance test procedures and criteria for acceptance test results to
26 the Engineer. Notify the Engineer a minimum of one (1) week before the date
27 scheduled for testing.
28

29 (E) Turn over to the Engineer a complete and operating vehicle counting
30 system according to the contract.
31

32 Furnish and install incidental parts necessary to restore the enhanced vehicular
33 classification traffic counting system as though such parts were in the contract.
34

35 **621.02 Materials.**
36

37 Electrical equipment shall conform to the NEMA Standards and this contract.
38 Materials and workmanship shall conform to "National Electric Code", (the code);
39 General Order Nos. 6, and 10 of the Hawaii Public Utilities Commission; ASTM
40 standards; the ANSI and applicable revisions for all the above codes and standards
41 and local ordinances that may apply.
42

43 (A) **Piezoelectric Sensors (Piezo Sensors).**
44

45 (1) Piezo sensors shall meet the following conditions:
46

- 47 (a) A minimum operating life of one (1) year from the date of
48 acceptance.
- 49
- 50 (b) Meet the requirements as outlined in FHWA No. DP-88-76-
51 006.
- 52
- 53 (c) Be 12-feet in length (or as determined by the Engineer).
- 54
- 55 (d) Be manufactured complete with home-run cable (non-
56 spliced).
- 57
- 58 (e) Have 16 gauge flat braided silver plated copper wire center
59 core with highly compressed piezo-electric copolymerP (VDF-
60 TrFE) and an outer sheath of 0.16" thick brass meeting CDA-
61 260 as required by ASTM B87-88.
- 62
- 63 (f) Be approximately 0.26" wide with a maximum thickness of
64 0.063" (plus/minus 0.05").
- 65
- 66 (g) Have insulation resistance between core and shield greater
67 than 500M ohms.
- 68
- 69 (h) Shall have a piezoelectric coefficient greater or equal to
70 20pc/N nominal.
- 71
- 72 (i) Have designs and installation techniques proven reliable in
73 conditions (soil and environmental) similar to those in Hawaii.
- 74
- 75 (j) Be able to withstand at least one million cycles.
- 76
- 77 (k) Interface with the counting equipment to perform the
78 applications required for the EVC System.
- 79
- 80 (l) Include all mounting hardware and AS475 axle sensor
81 grout (or equivalent), used for installation.
- 82
- 83 (2) The lead cable from the piezo sensor stubs to the EVC cabinet
84 shall meet the following conditions:
- 85
- 86 (a) Be manufactured complete with the piezo sensor.
- 87
- 88 (b) RG58 rated for underground direct burial.
- 89
- 90 (c) Have an outer jacket of 0.187" outside diameter.
- 91
- 92 (d) Possess nominal capacitance of 27 pF/Ft.
- 93

94 (e) Have pre-made (factory-made) termination connections.

95
96 (f) Be field measured so that the length suits the installation
97 conditions.

98
99 (g) Have sufficient length to reach the EVC cabinet. In the
100 event that the lead cable is too short to reach the EVC cabinet,
101 splicing will only be allowed from the final pull box to the EVC
102 cabinet. Splicing of the piezo sensor lead cable will only be
103 allowed under this condition. Splicing must be done by use of a
104 splice kit.

105
106 (3) The supplied AS475 axle sensor grout (or equivalent) shall meet
107 the following conditions:

108
109 (a) Be suitable for installation in both asphalt and Portland
110 cement pavements.

111
112 (b) Must require no special equipment to facilitate installation.

113
114 (c) Must have a short curing time (less than 75 minutes) to
115 minimize lane closure time.

116
117 (d) Should be of sufficient consistency to prevent "running"
118 when being applied on road surfaces.

119
120 (e) Particulate matter within the sealer must not separate or
121 settle.

122
123 (f) Must be approved by the piezo sensor manufacturer and
124 the Engineer.

125
126 (4) An appropriate in-road temperature sensor shall be supplied to
127 provide temperature correction data for the piezo sensors. The
128 temperature sensor shall be an in-road sensor, as approved by the
129 Engineer.

130
131 **(B) Sensor Loops.**

132
133 (1) Sensor Loops shall meet the following conditions:

134
135 (a) 14 AWG Stranded THHN

136
137 (b) 600 Volts

138
139 (c) IMSA Spec 51-3 Certified.

141 (d) Be manufactured complete with lead-in and home-run
142 cables (non-spliced).

143
144 (e) Include installation materials and epoxy loop sealant for
145 installation.

146
147 (2) The lead cable shall meet the following conditions:

148
149 (a) Polyethylene insulated

150
151 (b) Stranded-Tinned-Copper 14 AWG

152
153 (c) 2 Conductor Cable

154
155 (d) Stranded Tinned-Copper Drain Wire

156
157 (e) Aluminum – Polyester Shielded

158
159 (f) Polyethylene Jacketed

160
161 (g) 600 Volts Rated

162
163 (h) IMSA Spec. 50-2 Certified.

164
165 (i) Have sufficient length so that the lead cable is complete. In
166 the event that the cable is too short, splicing of the lead cable
167 shall only be allowed from the final pull box to the EVC cabinet.
168 Splicing of the sensor loop lead cable will only be allowed under
169 this condition. Splicing must be done by use of a splice kit.

170
171 (3) The supplied epoxy loop sealant shall meet the following
172 conditions:

173
174 (a) Shall be compatible with IMSA #51-3 loop detector wire.

175
176 (b) Be manufactured as ready to install and not require any
177 mixing.

178
179 (c) Be manufactured as packaged in a tube so it can be
180 applied by applicator gun.

181
182 (d) Be suitable for installation in both asphalt and Portland
183 cement pavements.

184
185 (e) Must have a short curing time (less than 75 minutes) to
186 minimize lane short lane closure time.
187

188 (f) Particulate matter within the sealer must not separate or
189 settle.

190 (g) Must be approved by the Engineer.
191

192 (C) **Conduits.** The contractor shall use steel or PVC Schedule 80
193 electrical conduits for all exposed construction. PVC Conduits shall be used
194 for all underground construction.
195

196 (1) **Steel Conduits.** Steel conduits shall meet the following
197 conditions:
198

199 (a) Be manufactured of rigid metal conforming to ANSI
200 Standard C80.1 and Article 344 of National Electrical Code.
201

202 (b) Exterior and interior surfaces of conduits and fittings shall
203 be hot-dip zinc coated in accordance with AASHTO M232.
204

205 (c) Interior of conduit shall be continuous coating of zinc-
206 chromate, lacquer, or enamel. Each length shall bear UL label.
207

208 (d) Six-inch conduit sample cut from center of standard length
209 of conduit shall be submitted to Engineer for acceptance.
210 Conduit will be tested in accordance with ASTM A239. Interior
211 and exterior of conduit shall no show fixed deposit of copper
212 after four one-minute immersions in standard copper sulfate
213 solution.
214

215 (2) **Plastic Conduits.** Each length shall bear UL label.
216

217 (3) **Duct Sealing Compound.** Duct sealing compound shall
218 conform to the following:
219

220 (a) Waterproof, rodent proof, nonoxidizing; noncorrosive to
221 metals, rubber, plastic, lacquer, and paints; and non-hardening
222 when subject to temperatures ranging from -30 degrees F to
223 150 degrees F. Foam sealant will not be allowed.
224

225 (b) Readily workable for thumbing into openings and forming
226 into seals around wires inside conduits and openings around
227 conduits.
228

229 (c) Clean, nonpoisonous and non-injurious to human skin.
230

231 (d) Seal against water, dust and air.
232
233

(e) Adhere to wood, glass, plastics, metal, rubber and painted surfaces.

(D) Other Materials.

Other materials shall meet the requirements specified in the following:

Structural Concrete Section 601

Trench Backfill Material Subsection 703.21

Conductors and Cables Subsection 770.06

621.03 Construction Requirements.

(A) Equipment List and Drawings. Submit within seven days following contract award two copies of materials and equipment purchase requisition, including copies of the equipment list, manufacturer's brochures, catalog cuts, and shop drawings to the Engineer for acceptance.

Order materials and equipment immediately upon acceptance by the Engineer. If the Contract award is rescinded by the Department after ordering of materials and equipment, the Department will purchase ordered materials and equipment at cost based on invoices. Purchase price will include transportation cost and applicable State excise taxes. Purchase price will not include profit.

Upon completion and acceptance of work, submit an 'As Built' or corrected plan showing in detail the construction changes per Section 648 – Field Posted Drawings.

(B) Excavation and Backfill. Excavate and backfill in accordance with Section 204 – Excavation and Backfill for Miscellaneous Facilities. Place the material from the excavation to prevent damage and obstruction to vehicular and pedestrian traffic and interference with surface drainage.

(C) Installation. The Contractor shall notify the State at least two weeks prior to installation of the new traffic counting equipment and electronics.

(1) Piezo Sensors. Piezo sensor installation shall meet the following conditions:

(a) Be supervised by the manufacturer's representative for the piezo sensors.

(b) Construction shall reflect the number and configuration for the piezo sensors as shown in the construction plans. If the

number and configuration need to be modified, the Contractor shall inform the State at the time of submitting the proposal, or earlier, and submit Shop Drawings of the revised configuration for approval.

(c) Installed within the roadway, two each per lane, in both traffic directions.

(d) Saw cuts shall be constructed in strict accordance with specifications of the manufacturer.

(e) Use $\frac{3}{4}$ " thick blade to make a $\frac{3}{4}$ " wide x 2" deep slots for the piezo sensor. The slots should be 12'8" long, or as approved by the Engineer.

(f) Use $\frac{1}{4}$ " thick blade to make a $\frac{1}{4}$ " wide slot for the piezo sensor lead cable. The depth of the slot shall be as shown on the plans.

(g) Saw cuts shall be made by wet cutting. Dry cutting shall not be allowed.

(h) Saw cuts shall be first vacuumed (by use of shop-vac) and then cleaned by the use of a pressure washer. Compressed air shall then be used to dry the slots and remove any additional debris before inserting the piezo sensors.

(i) Inspect saw cuts before inserting the piezo sensors. If any additional debris or moisture is observed use compressed air to dry the slots and remove any additional debris before proceeding with installation.

(j) Embed piezo sensors in epoxy sealant with clips for mounting at 6" intervals. Install piezo sensors in saw cuts in the road surface, approximately $\frac{3}{4}$ " wide x 2" deep.

(k) Lay piezo sensor in saw cut at 1- $\frac{1}{4}$ " below the surface of the roadway or as recommended by the manufacturer. Install piezo sensor straight and flat in saw cut. Secure sensor in place along the entire length of the sensor in the slot by quick setting epoxy sealant clips.

(l) Fill voids of the piezo sensor saw cuts with AS475 axle sensor grout (or equivalent). The AS475 axle sensor grout (or equivalent) shall be prepared in accordance with the manufacturer's instructions, and shall result in a finish approximately $\frac{1}{16}$ " above the surface of pavement or as shown

on the plans. The sealant curing requirements of the manufacturer shall be complied with and traffic loading shall not be permitted until the sealant is fully cured.

(m) Hot tar shall not be used.

(n) Do not allow traffic on the completed system until the manufacturer's representative approves all conditions of the installation with the acceptance by the Engineer. Thereafter, testing in accordance with the manufacturer's requirements shall be completed before public traffic is allowed.

(o) Overall length of the piezo sensor lead cable shall be 300-feet maximum. Provide loop of 5-feet in handhole for each cable. In the event that the cables provided have insufficient length to reach the equipment harness inside the cabinet, the cables shall be rejected. Splicing to lengthen the cable will not be allowed, except from the final pull box to the EVC cabinet. Splicing must be done by use of a splice kit.

(p) In the event that heating of the encapsulating material is allowed by the Engineer, the temperature of the material shall not be allowed to exceed 170 degrees F. In the event that the temperature exceeds the maximum allowed, the entire piezo sensor system installed shall be replaced.

(q) Provide adequate power for all test equipment to meet the detailed and specific requirements of the manufacturer for all tests required for certification and acceptance. Provide all necessary equipment to perform the required tests.

(r) The in-road temperature sensor shall be installed according to the manufacturer's installation instructions, as approved by the Engineer.

(2) Sensor Loops.

(a) Install two sensor loops in each traffic lane, to measure speed and length of the vehicles and also to classify vehicles in conjunction with the axle detectors. Refer to the configuration shown in the construction plans.

(b) If the number and configuration of the sensor loops need to be modified from the number and configuration shown in the constructions plans, the Contractor shall inform the State at the time of submitting the proposal, or earlier, and submit Shop Drawings of the revised configuration for approval.

375
376 (c) New sensor loops shall be tested prior to shipment, with no
377 splices, and ready to install.

378
379 (d) Embed sensor loop and lead-in-wires in a 3/8" minimum
380 width saw-cut in the pavement. Saw cut depth to the top layer
381 of wire shall be at least 2" deep. The saw cut groove shall be
382 air blown to remove debris before installing the loop cable. Fill
383 the saw cut groove with loop sealant.

384
385 (e) Install sensor loops such that they are centered in the lane
386 relative to the final lane striping. Replacement of sensor loops
387 not centered in each lane relative to the final lane striping will be
388 done at no additional cost to the State.

389
390 (f) The sensor loop cable shall be continuous within the
391 roadway. The sensor loop itself includes four (4) turns of wire of
392 a size, as specified in the contract.

393
394 (g) Embedded lead-in cables shall be twisted five twists per
395 foot.

396
397 (h) Do not twist lead-in-wires from one sensor loop pair with
398 another sensor loop pair.

399
400 (i) The lead-in wires for the sensor loops can be spliced (as
401 directed by the Engineer) to new lead-in cables at the pull box.
402 The splice shall be made by the use of a splice kit. The splice kit
403 shall be utilized in accordance with the manufacturer's
404 specifications. The splice shall be inspected by the Engineer
405 before acceptance. Ensure sufficient wire lengths are provided
406 to be able to connect wires into the terminal block inside cabinet
407 without splices.

408
409 (j) HDOT or its representative will make the final connection
410 into the terminal block inside the cabinet, however, the
411 Contractor shall label the wires clearly to identify traffic direction,
412 lane number, and sequence of loops and piezo sensors in each
413 lane per direction. All labeling at the pull box and cabinet must
414 be consistent.

415
416 (k) Splice points of cables must be suspended near the top of
417 the pull box with j-hook or equivalent.

418
419 (3) Pull Boxes.
420

421 (a) Use existing pull boxes as indicated in the contract
422 documents. Carefully excavate around areas of existing pullbox
423 to identify conduit locations.

424
425 (b) Restore excavated area around pull boxes so that covers
426 are level with curb or sidewalk grade or 1" above existing
427 ground.

428
429 **(4) Conduits.**

430
431 (a) Pull sensor lead cables using existing conduits to the
432 existing pullbox.

433
434 (b) Seal the ends of the duct with plugs at the end of each day
435 of work, whenever problems interrupt the duct installation work
436 and whenever ducts are subject to submergence in water.

437
438 (c) Keep the conduits clean during construction.

439
440 (d) Use only hand shovels in compacting concrete
441 encasements. Cure the concrete for at least 72 hours before
442 permitting vehicular traffic to run over the concrete.

443
444 (e) Provide each conduit run with a No. 10 gage flexible, zinc-
445 coated pull wire extending through its entire length. Double an
446 additional five (5) feet back into the conduit at each end of the
447 run. Conduits and sleeves entering pull boxes shall end flush in
448 the wall with ends ground smooth. Plug the conduits and
449 sleeves temporarily.

450
451 (f) The completed duct lines shall be subject to a field test.
452 Pass a bullet-shaped test mandrel about fourteen (14) inches
453 long with a diameter 0.5 inch less than the inside diameter of
454 the ducts through the entire length of each duct run. The
455 Engineer will consider scouring found on the mandrel deeper
456 than one thirty-seconds of an inch an indication of burrs and/or
457 obstructions in the duct run. Normal abrasion between the duct
458 line and bottom of mandrel is not an indication of burrs and/or
459 obstructions in the duct run. Remove such burrs and/or
460 obstructions. Pass the test mandrel through again. Repeat the
461 process until the Contractor gets a satisfactory result.

462
463 (g) The Contractor shall seal the wire splicing made within the
464 pullbox with a splice kit. The Contractor shall tag and identify all
465 wire splicings clearly.
466

467 (h) The Contractor shall seal the ends of the conduits
468 completely to keep out moisture.

469
470 **(5) Wiring.**

471
472 (a) Wiring shall conform to the appropriate articles of the Code.
473 Arrange the wiring within assemblies, and pull boxes neatly.
474 Encase the wiring installed underground in conduits. Before
475 installing the wires and cables in conduits, pull a wire brush,
476 swab and mandrel through each conduit for the removal of
477 extraneous matter and verification of the absence of
478 obstructions and debris from the conduit system.

479
480 (b) Furnish the cables on reels and handle the cables with
481 great care to avoid damage to the conductors or the jacket. Pull
482 the cables directly from their cores or reels into the
483 conduits. Do not pull off and lay the cables on the ground
484 before installation. Make the pulls in one direction only.
485 Lubricants used shall be as recommended by the cable
486 manufacturer or accepted by the Engineer. Do not leave the
487 wires or cables under tension nor tight against bushings or
488 fittings.

489
490 (c) The Contractor shall pull the cable in the conduit with a
491 cable grip designed to provide a firm hold on the exterior covering
492 of the cable. The Contractor shall pull the cable with a minimum
493 of dragging on the ground or pavement. The Contractor shall
494 use powdered soapstone, talc, or other acceptable lubricants to
495 ease the pulling of the cable.

496
497 (d) Remove the damaged ends resulting from the use of
498 pulling grips soon after pulling the cable. Maintain the cable end
499 seals. Do not pull the open ended cables through the
500 conduits. Cables shall be continuous from pulling point to
501 pulling point. The Engineer will not permit splices within the
502 continuous conduit sections. Tape or seal the ends of the spare
503 conductors as accepted.

504
505 (e) Splicing shall be made by use of a splice kit.

506
507 (f) Coil neatly, at least 5 feet of slack conductor or cable near
508 each cabinet foundation, at both ends of each conductor and
509 cable run, and at least 2 feet of slack at each traffic signal box.
510

511 (g) The Contractor shall tape the cable ends to exclude
512 moisture. The cable ends shall remain taped until the
513 Contractor attaches the terminal equipment. The Contractor
514 shall submit brochures for cable connections in terminal
515 cabinets for acceptance.
516

517 (h) The Contractor shall tag and label all lead-in cables in the
518 cabinet and the pull box permanently according to the contract.
519 The Contractor shall place two (2) additional pull lines through
520 each conduit to facilitate any future replacement of the lead-in
521 cables.
522

523 **(D) Bonding and Grounding.**
524

525 (1) Secure metallic conductor and cable sheaths, and conduits,
526 mechanically and electrically to form continuous system.
527

528 (2) Ground system in accordance with the NEC and as specified
529 herein. Provide No. 8 AWG copper wire or equivalent copper strap of
530 same cross-sectional area for bonding and grounding jumpers.
531

532 (3) Ground conduits and neutral wires at service points as required in
533 accordance with the NEC, using No. 6 AWG or equal for grounding
534 conductors.
535

536 (4) Install copper-clad steel or pure copper ground rod 5/8-inch
537 diameter by 8 feet long alongside each traffic signal standard and
538 controller concrete base.
539

540 (5) Connect grounding rods with No. 6 AWG wire to No. 8 AWG
541 ground wire loop and power system neutral.
542

543 (6) On wood poles, ground equipment mounted less than 8 feet
544 above ground surface.
545

546 **(E) Inspection and Testing.**
547

548 (1) **Preliminary Arrangements.** The equipment shall be given
549 requisite factory tests as necessary to determine that the workmanship
550 and materials are free from defects and to establish that the design
551 and construction are necessary.
552

553 Arrange for and conduct shop tests of the equipment to establish
554 compliance of the contract documents and all applicable codes and
555 standards. Furnish certified reports showing the results of all such
556 tests. Test facilities shall be subject prior inspection by the Engineer.
557 Notify the Engineer at least 21 calendar days before the scheduled

start of a test so that the Engineer may elect to witness any or all such tests. Furnish protection of equipment to prevent damage during the test period. All repair or replacement costs of any item damaged as a result directly or indirectly of the test will be at no cost to the State.

Unless otherwise noted in the contract documents, shop testing and inspection of the components or the complete system shall be in accordance with the Contractor's standard practice. Supply a list of all the Contractor's standard testing with the equipment submittal. The Engineer shall not be charged for any of the preliminary testing.

(2) Inspection. The Engineer reserves the right to all inspect all material during fabrication and before shipment and shall have access to the manufacturer's or Contractor's plant as required.

(3) Tests.

(a) After installation of piezo sensors, perform and furnish written test results for each piezo sensor showing:

- 1) Resistance: The resistance should be at least 1 MegaOhm.
- 2) Capacitance: The capacitance should range from 5 to 20 nano Farads.
- 3) Dissipation Factor: The reading should be less than 0.04.

Provide all testing equipment such as BK 875A or equivalent LCR meter, Fluke 75 or higher/equivalent multimeter, Megohmmeter, and Scope meter or oscilloscope for the above tests.

(b) After the installation of the inductive loop detectors, furnish written test results for each loop sensor showing:

- 1) Induced voltage (V)
- 2) f = Frequency of Loop (KHz)
- 3) L = Inductance of Loop (μ H)
- 4) R = Resistance of Loop (Ohm)
- 5) Meg Test = Loop insulation resistance should be $> 100M$ ohm.

605
606 Correct any defects discovered as a result of the Static tests
607 at no additional cost to the State.
608

609 **(4) Acceptance of EVC System.**

610
611 (a) The EVC System shall not be accepted and payment shall
612 not be made until the system has successfully met the required
613 testing.
614

615 (b) **Inspection.** The Owner reserves the right to inspect all
616 material during fabrication and before shipment and shall have
617 access to the manufacturer's or Contractor's plant as required.
618

619 **(F) Restoring Pavements and Other Improvements.** Restore the
620 existing pavements and other improvements to their original condition
621 according to the contract. Materials used for restoration work shall meet be
622 equal or better in quality than the materials the Contractor will replace and
623 matching in thickness, texture, and color whenever applicable. The grades of
624 the restored surfaces shall match the existing grades or as indicated in the
625 contract plans.
626

627 **(G) Warranty.** Materials and equipment installed for permanent
628 construction shall be new. The contract contemplates the use of first-class
629 material and equipment throughout the performance of the contract.
630

631 Secure from the manufacturer(s), a warranty or warranties
632 guaranteeing equipment from defects in materials, design and workmanship
633 for not less than twelve (12) months from the date of acceptance.
634

635 When requiring adjustments or repairs during the warranty period,
636 adjust or repair the existing unit within twenty-four (24) hours from the time of
637 notification.
638

639 When requiring repairs that need factory corrections during the
640 warranty period, replace the existing unit with an accepted temporary
641 operational replacement unit within twenty-four (24) hours from the time of
642 notification until the Contractor can install the new unit. Install the new,
643 identical non-defective unit within thirty (30) days from the time of notification.
644

645 **621.04 Method of Measurement.** The Enhanced Vehicular Classification (EVC)
646 Traffic Counting System will be paid for on a lump sum basis. Measurement for
647 payment will not apply.
648

649 **621.05 Basis of Payment.** The Engineer will pay for the accepted EVC system
650 on a lump sum basis. Payment will be full compensation for the work prescribed in
651 this section and the contract documents.
652

653 The Engineer will pay for the following pay item when included in the proposal
654 schedule:

655		
656	Pay Item	Pay Unit
657		
658	EVC Traffic Counting System	Each
659		
660		
661		
662		

END OF SECTION 621

PROPOSAL SCHEDULE

ITEM NO.	ITEM	APPROX. QUANTITY	UNIT	UNIT PRICE	AMOUNT
209.0500	Installation, Maintenance, Monitoring, and Removal of BMP	L.S.	L.S.	L.S.	\$ _____

699.0500	Mobilization (Not to exceed 6% of the Sum of all items excluding the bid price of this item.)	L.S.	L.S.	L.S.	\$ _____
Sum of All Items					\$ _____
NOTE: Bidders must complete all unit prices and amounts. Failure to do so may be grounds for rejection of bid.					

Pre-Bid Meeting Minutes

Project:

Kaunalapau Highway
Pavement Preventive Maintenance

Project No.: 440A-01-16M

Pre-bid meeting was held on Thursday, February 11, 2016 at 11:00 A.M at the Maui District Conference Room at 650 Palapala Drive, Kahului.

1. Scope of project was discussed and then opened floor for questions.

Meeting was adjourned at 9:30 A.M.

Respectfully Submitted,

Christopher P. Della
Design Engineer

SIGN IN SHEET – PRE-BID MEETING

Thursday, February 11, 2016 @ 9:00 A.M.
Maui District Office

Kaunalapau Highway Pavement Preventive Maintenance
Airport Road to Lanai City

Project No.440A-01-16M

	NAME	COMPANY	PH. NO./FAX	E-MAIL
1.	Christopher P. Della	DOT	873-3374/873-3535	christopher.p.della@hawaii.gov
2.	Fred Gutierrez	DOT	873-3390/873-3535	fred.c.gutierrez@hawaii.gov
3.	Alejandro S. Reboron	DOT	873-3374/873-3535	alejandro.s.reboron@hawaii.gov

Questions & Answers / Clarifications

- 1.) Bid Item 401.0510 - Hot Mix Asphalt (HMA) Pavement, Mix No. IV at Guardrail Under, Behind Guardrail and Beyond End Terminals - I didn't see any guardrail on this stretch of road, either on plans or on Google Maps. Please remove line item from bid.

Deleted Paving under the guard rail 401.0510

- 2.) Bid Item 631.0500 - Construction Sign with Post - there is an extra line in the proposal amount section. Please revise.

Updated Proposal schedule is attached.

3. Construction signs: please confirm that the amount of signs to be installed is what is shown on the signing plans. Page 16 note 9 states to install signs as directed by the engineer. The bid item is LS so there is no way to verify the amount to be installed at bid time.

Refer to sheets: 16, 20, and 26

- 4.) Construction signs: do the construction signs require type II OM on the post or any type of reflector?

It can be Type II OM or RM3

- 5.) Street name signs: are the street name signs being replaced? If so, please provide details of the signs for pricing purposes. Also, is there a pay item for these or are they incidental to the other bid items? Some of the stop signs do not have the street names on them as indicated on the plans

Refer to the Standard plans

- 6.) There are 2 "Adopt-a-Hwy" signs. Please provide the size of these signs, typically it is more than 10 sf, will there be a bid item for this signs?

It shall fall under Miscellaneous Sign

- 7.) Destination signs, there are no bid items for payment of these signs, will there be any?

There is a line item for Destination signs

- 8.) Destination signs please provide exact details on the required sign material and mounting. Are these signs to be flat panel signs or extruded panels, what is the required post mounting for each sign. Example: existing D-1 is extruded panel mounted on 3 flange channel post. Existing D-2 is flat panel mounted on 2 square tube post.

Please refer to the Standard plans.

- 9.) Sheet 20, approximate sta 179+30 plans show replacing a "Historic" sign, please provide details and mounting requirements for pricing purposes. Will there be a bid item for this sign?

Please refer to the Standard plans.

- 10.) Are DOT specs 645.03 are advisory signs required to be installed, if so, how many are required?

If plans call for advisor signs please include them in your bid.

- 11.) Bid item 632.0520 for RM-4 reflector markers 4 each. We cannot find where these are installed on the plans, please clarify where these are installed so we can confirm the quantity to bid on since the item is LS.

It is found on Sheet 22
