**209.01 Description.** This section describes the following:

(A) Including detailed plans, diagrams, and written Site-Specific Best Management Practices (BMP); constructing, maintaining, and repairing temporary water pollution, dust, and erosion control measures at the project site, including local material sources, work areas and haul roads; removing and disposing hazardous wastes; control of fugitive dust (defined as uncontrolled emission of solid airborne particulate matter from any source other than combustion); and complying with applicable State and Federal permit conditions.

- (B) Work associated with construction stormwater, dewatering, and
   hydrotesting activities and complying with conditions of the National Pollutant
   Discharge Elimination System (NPDES) permit(s) authorizing discharges
   associated with construction stormwater, dewatering, and hydrotesting
   activities.
- 26 (C) Potential pollutant identification and mitigation measures are listed in
   27 Appendix A for use in the development of the Contractor's Site-Specific BMP.
- 29 Requirements of this section also apply to construction support activities 30 including concrete or asphalt batch plants, rock crushing plants, equipment staging yards/areas, material storage areas, excavated material disposal 31 32 areas, and borrow areas located outside the State Right-of-Way. For areas serving multiple construction projects, or operating beyond the completion of 33 34 the construction project in which it supports, the Contractor shall be 35 responsible for securing the necessary permits, clearances, and documents, and following the conditions of the permits and clearances, at no cost to the 36 37 State. 38
- 39 209.02 Materials. Comply with applicable materials described in Chapters 2 and 3
   40 of the current HDOT "Construction Best Management Practices Field Manual". In
   41 addition, the materials shall comply with the following:
- 42

43 (A) Grass. Grass shall be a quick growing species such as rye grass,
44 Italian rye grass, or cereal grasses. Grass shall be suitable to the area and
45 provide a temporary cover that will not compete later with permanent cover.
46 Alternative grasses are allowable if acceptable to the Engineer.

- 47 (B) Fertilizer and Soil Conditioners. Fertilizer and soil conditioners shall
   48 be a standard commercial grade acceptable to the Engineer. Fertilizer shall
   49 conform to Subsection 619.02(H)(1) Commercial Fertilizer.
- 50

51 **Hydro-mulching.** Hydro-mulching used as a temporary vegetative (C) 52 stabilization measure shall consist of materials in Subsections 209.02(A) -53 Grass, and 209.02(B) – Fertilizer and Soil Conditioners. Mulches shall be 54 recycled materials including bagasse, hay, straw, wood cellulose bark, wood 55 chips, or other material acceptable to the Engineer. Mulches shall be clean 56 and free of noxious weeds and deleterious materials. Potable water shall meet the requirements of Subsection 712.01 - Water. Submit alternate sources of 57 irrigation water for the Engineer's acceptance if deviating from 712.01 - Water. 58 59 Installation and other requirements shall be in accordance with portions of 60 Section 641- Hydro-Mulch Seeding including 641.02(D) - Soil and Mulch Tackifier, 641.03(A) – Seeding, and 641.03(B) - Planting Period. Install non-61 62 vegetative controls including mulch or rolled erosion control products while the 63 vegetation is being established. Water and fertilize grass. Apply fertilizer as 64 recommended by the manufacturer. Replace grass the Engineer considers 65 unsuitable or sick. Remove and dispose of trash and debris. Remove 66 invasive species. Mow as needed to prevent site or signage obstructions, fire hazard, or nuisance to the public. Do not remove down stream sediment 67 control measures until the vegetation is uniformly established, including no 68 69 large bare areas, and provides 70 percent of the density of pre-disturbance 70 vegetation. Temporary vegetative stabilization shall not be used longer than 71 one year.

72 73 74

75

80 81

82

83

84

85

86 87 **(D) Silt Fences.** Comply with ASTM D6462, Standard Practice for Silt Fence Installation.

Alternative materials or methods to control, prevent, remove and dispose
 pollution are allowable if acceptable to the Engineer.

- 79 **209.03** Construction.
  - (A) **Preconstruction Requirements.**

(1) Water Pollution, Dust, and Erosion Control Meeting. Schedule a water pollution, dust, and erosion control meeting with the Engineer after Site-Specific BMP is accepted in writing by the Engineer. Meeting shall be scheduled a minimum of 7 calendar days prior to the Start Work Date. Discuss sequence of work, plans and proposals for water pollution, dust, and erosion control.

| 90  | (2) Water      | <sup>·</sup> Polluti | ion, Dust, and Erosion Control Submittals.            |

|     |              |  |

(h) Site-Specific BMP Review Checklist. The checklist may be downloaded from HDOT's Stormwater Management website at http://stormwaterhawaii.com.

Date and sign Site-Specific BMP Plan. Keep accepted copy on site or at an accessible location so that it can be made available at the time of an on-site inspection or upon request by the Engineer, HDOT Third-Party Inspector, and/or DOH/EPA Representative. Amendments to the Site-Specific BMP Plan shall be included with original Site-Specific BMP Plan. Modify SWPPP if necessary to conform to revisions. Include date of installation and removal of Site-Specific BMP measures. Obtain written acceptance by the Engineer before implementing revised Site-Specific BMPs in the field.

Follow the guidelines in the current HDOT "Construction Best Management Practices Field Manual", in developing, installing, and maintaining Site-Specific BMPs for all projects. For any conflicting requirements between the Manual and applicable bid documents, the applicable bid documents will govern. Should a requirement not be clearly described within the applicable bid documents, notify the Engineer immediately for interpretation. For the purposes of clarification "applicable bid documents" include the construction plans, standard specifications, special provisions, Permits, and the SWPPP when applicable.

> Follow Honolulu's City and County "Rules for Soil Erosion Standards and Guidelines" for all projects on Oahu. Use respective Soil Erosion Guidelines for Maui, Kauai and Hawaii projects.

**(B) Construction Requirements.** Do not begin work until submittals detailed in Subsection 209.03(A)(2) - Water Pollution, Dust, and Erosion Control Submittals are completed and accepted in writing by the Engineer.

Install, maintain, monitor, repair and replace site-specific BMP
 measures, such as for water pollution, dust and erosion control; installation,
 monitoring, and operation of hydrotesting activities; removal and disposal of
 hazardous waste indicated on plans, concrete cutting slurry, concrete curing
 water; or hydrodemolition water. Site-Specific BMP measures shall be in
 place, functional and accepted by HDOT personnel prior to initiating any
 ground disturbing activities.

Provide rain gage with a<br>tolerance of at least 0.05 inches of rainfall. Install rain gage on project site in<br>an area that will not deter rainfall from entering the gate opening. Do not<br>install in a location where rain water may splash into rain gage. The rain gage<br>installation shall be stable and plumbed. Maintain rain gage and replace rain<br>gage that is stolen, does not function properly or accurately, is worn out, or<br>needs to be relocated. Do not begin field work until rain gage is installed and<br>Site-Specific BMPs are in place. Rain gage data logs shall be readily<br>available. Submit rain gage data logs weekly to the Engineer. |
|---|--|
| 235<br>236<br>227   | Address all comments received from the Engineer.   |
| 237<br>238<br>239<br>240<br>241   | Modify and resubmit plans and construction schedules to correct conditions that develop during construction which were unforeseen during the design and pre-construction stages.   |
| 242<br>243  | Coordinate temporary control provisions with permanent control features throughout the construction and post-construction period.  |
| 244   | Limit maximum authors area of earth material averaged at any time to   |
| 245   | Limit maximum surface area of earth material exposed at any time to  |
| 246   | 300,000 square feet. Do not expose or disturb surface area of earth material   |
| 247   | (including clearing and grubbing) until BMP measures are installed and   |
| 248   | accepted in writing by the Engineer. Protect temporarily or permanently  |
| 249   | disturbed soil surface from rainfall impact, runoff and wind before end of the   |
| 250   | work day.  |
| 251   |  |
| 252   | Immediately initiate stabilizing exposed soil areas upon completion of   |
| 253   | earth disturbing activities for areas permanently or temporarily ceased on any   |
| 254   | portion of the site. Earth-disturbing activities have permanently ceased when  |
| 255   | clearing and excavation within any area of the construction site that will not   |
| 256   | include permanent structures has been completed. Earth-disturbing activities   |
| 257   | have temporarily ceased when clearing, grading, and excavation within any  |
| 258   | area of the site that will not include permanent structures will not resume for a  |
| 259   | period of 14 or more calendar days, but such activities will resume in the   |
| 260   | future. The term "immediately" is used in this section to define the deadline for  |
| 261   | initiating stabilization measures. "Immediately" means as soon as practicable,   |
| 262   | but no later than the end of the next work day, following the day when the   |
| 263   | earth-disturbing activities have temporarily or permanently ceased.  |
| 264   |  |
| 265   | For projects with an NPDES Permit for Construction activities:   |
| 266   |  |
| 267   | (1) For construction areas discharging into waters not impaired for  |
| 268   | nutrients or sediments, complete initial stabilization within 14 calendar  |
| 269   | days after the temporary or permanent cessation of earth-disturbing  |
| 270   | activities.  |

271 For construction areas discharging into nutrient or sediment (2) 272 impaired waters, complete initial stabilization within 7 calendar days after the temporary or permanent cessation of earth-disturbing 273 274 activities. 275 276 For projects without an NPDES Permit for Construction activities, 277 complete initial stabilization within 14 calendar days after the temporary or 278 permanent cessation of earth-disturbing activities. 279 280 Any of the following types of activities constitutes initiation of stabilization: 281 282 283 Prepping the soil for vegetative or non-vegetative stabilization; (1) 284 285 (2) Applying mulch or other non-vegetative product to the exposed 286 area; 287 (3) 288 Seeding or planting the exposed area; 289 290 (4) Starting any of the activities in items (1) - (3) above on a portion of the area to be stabilized, but not on the entire area; and 291 292 293 Finalizing arrangements to have stabilization product fully (5) 294 installed in compliance with the deadline for completing initial 295 stabilization activities. 296 297 Any of the following types of activities constitutes completion of initial stabilization activities: 298 299 300 For vegetative stabilization, all activities necessary to initially (1) seed or plant the area to be stabilized; and/or 301 302 303 (2) For non-vegetative stabilization, the installation or application of all such non-vegetative measures. 304 305 306 If the Contractor is unable to meet the deadlines above due to circumstances beyond the Contractor's control, and the Contractor is using 307 308 vegetative cover for temporary or permanent stabilization, the Contractor may comply with the following stabilization deadlines instead as agreed to by the 309 Engineer: 310 311 312 (1) Immediately initiate, and complete within the timeframe shown 313 above, the installation of temporary non-vegetative stabilization measures to prevent erosion; 314 315

316 Complete all soil conditioning, seeding, watering or irrigation (2) 317 installation, mulching, and other required activities related to the planting and initial establishment of vegetation as soon as conditions or 318 319 circumstances allow it on the site; and 320 321 Notify and provide documentation to the Engineer the (3) 322 circumstances that prevent the Contractor from meeting the deadlines 323 above for stabilization and the schedule the Contractor will follow for 324 initiating and completing initial stabilization and as agreed to by the 325 Engineer. 326 327 Follow the applicable requirements of the specifications and special provisions including Section 619 Planting and Section 641 Hydro-Mulch 328 329 Seeding. 330 331 Immediately after seeding or planting the area to be vegetatively 332 stabilized, to the extent necessary to prevent erosion on the seeded or planted area, select, design, and install non-vegetative erosion controls that provide 333 cover (e.g., mulch, rolled erosion control products) to the area while vegetation 334 335 is becoming established. 336 337 Protect exposed or disturbed surface area with mulches, grass seeds or 338 hydromulch. Spray mulches at a rate of 2,000 pounds per acre. Add tackifier to mix at a rate of 85 pounds per acre. Apply grass seeds at a rate of 125 339 340 pounds per acre. For hydromulch, use the ingredients and rates required for 341 mulches and grass seeds. Submit recommendations from a licensed 342 Landscape Architect when deviating from the application rates above. 343 344 Apply fertilizer to mulches, grass seed or hydromulch per 345 manufacturer's recommendations. Submit recommendations from a licensed 346 Landscape Architect when the manufacturer's deviating from 347 recommendations. 348 349 Install velocity dissipation measures when exposing erodible surfaces 350 greater than 15 feet in height. 351 352 BMP measures shall be in place and operational at the end of work day 353 or as required by Section 209.03(B) Construction Requirements. 354 Install and maintain either or both stabilized construction entrances and 355 wheel washes to minimize tracking of dirt and mud onto roadways. Restrict 356 357 traffic to stabilized construction areas only. Clean dirt, mud, or other material tracked onto the road, sidewalk, or other paved area by the end of the same 358 day in which the track-out occurs. Modify stabilized construction entrances to 359 360 prevent mud from being tracked onto road. Stabilize entire access roads if 361 necessary.

| 362<br>363 | Chemicals may be used as soil stabilizers for either or both erosion and dust control if acceptable to the Engineer. |
|------------|--|
| 364        |  |
| 365        | Provide temporary slope drains of rigid or flexible conduits to carry  |
| 366        | runoff from cuts and embankments. Provide portable flume at the entrance.  |
| 367        | Shorten or extend temporary slope drains to ensure proper function.  |
| 368        |  |
| 369        | Protect ditches, channels, and other drainageways leading away from  |
| 370        | cuts and fills at all times by either:   |
| 371        | ,  |
| 372        | (1) Hydro-mulching the lower region of embankments in the  |
| 373        | immediate area.  |
| 374        |  |
| 375        | (2) Installing check dams and siltation control devices.   |
| 376        |  |
| 377        | (3) Other methods acceptable to the Engineer.  |
| 378        |  |
| 379        | Provide for controlled discharge of waters impounded, directed, or   |
| 380        | controlled by project activities or erosion control measures.  |
| 381        |  |
| 382        | Cover exposed surface of materials completely with tarpaulin or similar  |
| 383        | device when transporting aggregate, soil, excavated material or material that  |
| 384        | may be source of fugitive dust.  |
| 385        | <i>y</i> 3   |
| 386        | Cleanup and remove any pollutant that can be attributed to the   |
| 387        | Contractor.  |
| 388        |  |
| 389        | Install or modify Site-Specific BMP measures due to change in the  |
| 390        | Contractor's means and methods, or for omitted condition that should have  |
| 391        | been allowed for in the accepted Site-Specific BMP or a Site-Specific BMP that                                       |
| 392        | replaces an accepted Site-Specific BMP that is not satisfactorily performing.  |
| 393        | Modifications to Site-Specific BMP measures shall be accepted in writing by  |
| 394        | the Engineer prior to implementation.  |
| 395        |  |
| 396        | Properly maintain all Site-Specific BMP measures.  |
| 397        |  |
| 398        | For projects with an NPDES Permit for Construction Activities:   |
| 399        |  |
| 400        | (1) For construction areas discharging into nutrient or sediment   |
| 401        | impaired waters, inspect, prepare a written report, and make repairs to  |
| 402        | BMP measures at the following intervals:   |
| 403        |  |
| 404        | (a) Weekly.  |
| 405        |  |
| 406        | (b) Within 24 hours of any rainfall of 0.25 inch or greater  |
| 407        | which occurs in a 24-hour period.  |
|            |  |

| 100        |   |
|------------|---|
| 408        |   |
| 409        | (c) When existing erosion control measures are damaged or   |
| 410        | not operating properly as required by Site-Specific BMP.  |
| 411        | (0) For construction energy discharging to waters not improved for  |
| 412        | (2) For construction areas discharging to waters not impaired for   |
| 413        | nutrients or sediments, inspect, prepare a written report, and make   |
| 414        | repairs to BMP measures at the following intervals:   |
| 415        |   |
| 416        | (a) Weekly.   |
| 417        |   |
| 418        | (b) When existing erosion control measures are damaged or   |
| 419        | not operating properly as required by Site-Specific BMP.  |
| 420        | For projects without on NDDEC Dermit for Construction estivities  |
| 421        | For projects without an NPDES Permit for Construction activities,   |
| 422        | inspect, prepare a written report, and make repairs to BMP measures at the  |
| 423        | following intervals:  |
| 424        |   |
| 425<br>426 | (a) Weekly.   |
| 420<br>427 | (b) When existing erasion control measures are demaged or   |
| 427<br>428 | (b) When existing erosion control measures are damaged or<br>not operating properly as required by Site-Specific BMP. |
| 428        | not operating property as required by Site-Specific DMP.  |
| 429        | Temporarily remove, replace or relocate any Site-Specific BMP that  |
| 430        | must be removed, replaced or relocated due to potential or actual flooding, or  |
| 432        | potential danger or damage to project or public.  |
| 433        | potential danger of damage to project of public.  |
| 434        | Maintain records of inspections of Site-Specific BMP work. Keep   |
| 435        | continuous records for duration of the project. Submit copy of Inspection   |
| 436        | Report to the Engineer within 24 hours after each inspection.   |
| 437        | report to the Engineer within 2 r neare after each hepedich.  |
| 438        | The Contractor's designated representative specified in Subsection  |
| 439        | 209.03(A)(2)(d) shall address any Site-Specific BMP deficiencies brought up   |
| 440        | by the Engineer immediately, including weekends and holidays, and complete  |
| 441        | work to fix the deficiencies by the close of the next work day if the problem   |
| 442        | does not require significant repair or replacement, or if the problem can be  |
| 443        | corrected through routine maintenance. Address any Site-Specific BMP  |
| 444        | deficiencies brought up by the State's Third-Party Inspector in the timeframe   |
| 445        | above or as specified in the Consent Decree or MS4 NPDES Permit,  |
| 446        | whichever is more stringent. The Consent Decree timeframe requirement   |
| 447        | applies statewide. The MS4 NPDES Permit only applies to Oahu. In this   |
| 448        | section, "immediately" means the Contractor shall take all reasonable   |
| 449        | measures to minimize or prevent discharge of pollutants until a permanent   |
| 450        | solution is installed and made operational. If a problem is identified at a time in                                   |
| 451        | the day in which it is too late to initiate repair, initiation of repair shall begin on                               |
| 452        | the following work day.   |
| 453        | <b>.</b> .  |

454 When installation of a new pollution prevention control or a significant repair is 455 needed, complete installation or repair no later than seven calendar days from the time of notification/Contractor discovery. Notify the Engineer and 456 457 document why it is infeasible to complete the installation or repair within seven 458 calendar days and complete the work as soon as practicable and as agreed to 459 by the Engineer. Address Site-Specific BMP deficiencies discovered by the 460 Contractor within the timeframe above. The Contractor's failure to 461 satisfactorily address these Site-Specific BMP deficiencies, the Engineer 462 reserves the right to employ outside assistance or use the Engineer's own 463 labor forces to provide necessary corrective measures. The Engineer will charge the Contractor such incurred costs plus any associated project 464 engineering costs. The Engineer will make appropriate deductions from the 465 Contractor's monthly progress estimate. Failure to apply Site-Specific BMP 466 467 measures may result in one or more of the following: assessment of liquidated damages, suspension, or cancellation of Contract with the Contractor being 468 469 fully responsible for all additional costs incurred by the State.

470 471

472

473

474 475

476

477

488

(C) Discharges of Storm Water Associated with Construction Activities. If work includes disturbance of one acre or more, an NPDES Permit authorizing Discharges of Storm Water Associated with Construction Activity (CWB-NOI Form C) or Individual Permit authorizing storm water discharges associated with construction activity is required from the Department of Health Clean Water Branch (DOH-CWB).

478Do not begin construction activities until all required conditions of the479permit are met and submittals detailed in Subsection 209.03(A)(2) – Water480Pollution, Dust, and Erosion Control Submittals are completed and accepted in481writing by the Engineer.482

(D) Discharges Associated with Hydrotesting Activities. If hydrotesting
 activities require effluent discharge into State waters or drainage systems, an
 NPDES Hydrotesting Waters Permit (CWB-NOI Form F) or Individual Permit
 authorizing discharges associated with hydrotesting from DOH-CWB is
 required from the DOH-CWB.

489 Do not begin hydrotesting activities until the DOH-CWB has issued an 490 Individual NPDES Permit or Notice of General Permit Coverage (NGPC). 491 Conduct Hydrotesting operations in accordance with the conditions of the 492 permit or NGPC. 493

- 494 **(E) Discharges Associated with Dewatering Activities.** If dewatering 495 activities require effluent discharge into State waters or drainage systems, an 496 NPDES Dewatering Permit (CWB-NOI Form G) or Individual Permit 497 authorizing discharges associated with dewatering from DOH-CWB is required 498 from the DOH-CWB.
- 499

517

519

520

521

522

531

- 500 Do not begin dewatering activities until the DOH-CWB has issued an 501 Individual NPDES Permit or Notice of General Permit Coverage (NGPC). 502 Conduct dewatering operations in accordance with the conditions of the 503 permit or NGPC.
- 505 **(F)** Solid Waste. Submit the Solid Waste Disclosure Form for Construction 506 Sites to the Engineer within 21 calendar days of date of award. Provide a copy 507 of all the disposal receipts from the facility permitted by the Department of 508 Health to receive solid waste to the Engineer monthly. This should also 509 include documentation from any intermediary facility where solid waste is 510 handled or processed, or as directed by the Engineer. 511
- (G) Construction BMP Training. The Contractor's representative
  responsible for development of the Site-Specific BMP Plan and implementation
  of Site-Specific BMPs in the field shall attend the State's Construction Best
  Management Practices Training. The Contractor shall keep training logs
  updated and readily available.

### 518 **209.04** Measurement.

- (A) Installation, maintenance, monitoring, and removal of BMP will be paid on a lump sum basis. Measurement for payment will not apply.
- 523 **(B)** The Engineer will only measure additional water pollution, dust and 524 erosion control required and requested by the Engineer on a force account 525 basis in accordance with Subsection 109.06 – Force Account Provisions and 526 Compensation.
- 527
   528 209.05 Payment. The Engineer will pay for accepted pay items listed below at
   529 contract price per pay unit, as shown in the proposal schedule. Payment will be full
   530 compensation for work prescribed in this section and contract documents.
- 532 The Engineer will pay for each of the following pay items when included in 533 proposal schedule: 534

| 535<br>535        | Pay Item  | Pay Unit      |
|-------------------|---|---------------|
| 536<br>537        | Installation, Maintenance, Monitoring, and Removal of BMP | Lump Sum      |
| 538<br>539<br>540 | Additional Water Pollution, Dust, and Erosion Control     | Force Account |

541 An estimated amount for force account is allocated in proposal schedule under 542 'Additional Water Pollution, Dust, and Erosion Control', but actual amount to be paid 543 will be the sum shown on accepted force account records, whether this sum be more 544 or less than estimated amount allocated in proposal schedule. The Engineer will pay 545 for BMP measures requested by the Engineer that are beyond scope of accepted 546 Site-Specific BMP on a force account basis.

547

548 No progress payment will be authorized until the Engineer accepts in writing 549 Site-Specific BMP or when the Contractor fails to maintain project site in accordance 550 with accepted BMP.

551

552 For all citations or fines received by the Department for non-compliance, 553 including compliance with NPDES Permit conditions, the Contractor shall reimburse 554 State within 30 calendar days for full amount of outstanding cost State has incurred, 555 or the Engineer will deduct cost from progress payment.

556

557 The Engineer will assess liquidated damages up to \$27,500 per day for non-558 compliance of each BMP requirement and all other requirements in this section.

#### 560 Appendix A

561

562 The following list identifies potential pollutant sources and corresponding 563 BMPs used to mitigate the pollutants. Each BMP is referenced to the 564 corresponding section of the current HDOT Construction Best Management 565 Practices Field Manual or appropriate Supplemental Sheets. The Manual may be 566 obtained from the HDOT Statewide Stormwater Management Program Website at 567 http://www.stormwaterhawaii.com/resources/contractors-and-consultants/ under Construction Best Management Practices Field Manual. Supplemental BMP 568 569 sheets are located at http://www.stormwaterhawaii.com/resources/contractors-570 and-consultants/storm-water-pollution-prevention-plan-swppp/ under Concrete 571 Curing and Irrigation Water.
