- (2) Additional guidance through area is required.
- (3) Markings for special traffic patterns are warranted.

Install temporary, solid, 4-inch pavement marking tapes on edges of traveled way for newly paved, scarified, or cold-planed surfaces, reconstructed areas, and unmarked areas. Where curbs are present at edges of traveled way, 4-inch pavement marking tapes may be eliminated.

Maintain and replace temporary pavement markings, flexible delineators, and barricades.

Remove temporary markings before installing permanent pavement markings.

Cover or temporarily remove signs that conflict with temporary pavement markings.

When pavement markings are not installed by the completion of construction operations for each day, the Engineer will suspend work and progress payment in accordance with Subsection 105.01(A) - Authority of the Engineer.

TABLE 629.03-1 TEMPORARY PAVEMENT MARKINGS TYPE **PAVEMENT MARKINGS** Passing Permitted -Single 4-inch yellow stripe 5 feet in length spaced 20 feet Both Sides on center with Type D markers spaced 40 feet on center and located on center of 5-foot length of stripe. Passing Prohibited -Double solid 4-inch yellow stripes with Type D markers Both Sides placed 20 feet on center on one of 4-inch yellow stripes selected by the Engineer. Passing Permitted -Single continuous 4-inch yellow stripe with Type D markers One Side Only placed on stripe 20 feet on center on no-passing side and single 4-inch yellow stripes 5 feet in length spaced 20 feet on center on passing side.

Lane Lines - Lane Changing Permitted	Single 4-inch yellow or white stripe 5 feet in length spaced 20 feet on center with Type C or Type D markers spaced 40 feet on center.
Lane Lines - Lane Changing Prohibited	Double solid 4-inch white stripes with Type C markers placed 20 feet on center on one of the 4-inch white stripes selected by the Engineer.
Crosswalk	Two 12-inch white transverse lines spaced 8 feet on center or as ordered by the Engineer.
Stop Line	Single 12-inch white transverse line.
Note: Paint may be use	ed for temporary markings in areas where final paving is not

Note: Paint may be used for temporary markings in areas where final paving is not complete."

(C) Permanent Pavement Markings.

 (1) **Permanent Pavement Markers.** Provide pavement markers conforming to shapes, dimensions, tolerances, types, uses, and layout as indicated in the contract documents.

Submit samples of pavement markers and adhesives for testing and acceptance 10 days before usage. The Engineer will sample and test pavement markers in accordance with Subsection 755.02 – Pavement Markers.

Use bituminous adhesive or standard set type epoxy adhesive to bond pavement markers to pavement.

Heat and dispense bituminous adhesive from equipment that can maintain required temperature.

When using epoxy adhesive, mix components by employing two-component type automatic mixing and extruding apparatus. Automatic mixing equipment shall use positive displacement pumps and shall properly meter components in ratio of 1:1, \pm 5 percent by volume. Check ratio in presence of the Engineer at beginning of each day or as ordered by the Engineer.

Mix only standard set type adhesive manually, and do not mix more than 1 quart.

106Place pavement markers within 60 seconds after mixing and107extruding adhesive. No further movement of placed marker will be108allowed. Use completely each mixed batch of adhesive within 5109minutes after start of mixing. Place adhesive on pavement surface or

110 on bottom of marker, covering entire area of contact, without voids and with uniform thickness, to produce slight excess after pressing marker 111 in place. Place marker in position and apply pressure with slight 112 twisting motion until firm contact is made with pavement. If adhesive 113 cannot be readily extruded from under marker when pressure is 114 applied, discard remaining batch of adhesive. Immediately remove 115 excess adhesive around edge of marker, on surrounding pavement, 116 and on exposed surfaces of markers. 117 118

119

120

121 122 123

124

125

126

127 128 Remove adhesive from exposed faces of markers, using soft rags moistened with mineral spirits conforming to MIL-PRF-680A(1) or kerosene. Other solvents will not be allowed.

Where bituminous adhesive is used, protect marker against impact until adhesive has hardened to the degree designated by the Engineer. Where epoxy adhesive is used, protect pavement markers against impact until adhesive has hardened in accordance with Table 629.03-2 – Adhesive Set Time For Epoxy Pavement Markers:

TABLE 629.03-2 - ADHESIVE SET TIME FOR EPOXY PAVEMENT MARKERS		
Temperature [*] (Degrees F)	Standard Set Type (Hours)	Rapid Set Type (Minutes)
100	1.5	15
90	2	20
80	3	25
70	4	30
60	5	35
50	7	45
40		65
30	No application below 50	85
20	degrees F	No application below 30
10		degrees F

	*Either pavement surface temperature or ambient air temperature, whichever is lower.
129	
130	Do not use hardness of epoxy rim around marker as an
130	indication of degree of cure.
	indication of degree of cure.
132	
133	Remove and replace pavement markers that do not meet set
134	time requirements indicated in Table 629.03-2 - Adhesive Set Time For
135	Epoxy Pavement Markers.
136	
137	Do not install pavement markers when relative humidity is
138	greater than 80 percent, or when pavement surface is not dry.
139	3 • • • • • • • • • • • • • • • • • • •
140	When using Type A and J pavement markers for delineating 10-
141	foot lane stripes, install markers in sets of four, with no fractional sets
141	allowed. Adjust lengths of each 10-foot stripe and each 30-foot gap for
143	skip striping \pm 1 foot, to present uniform and balanced pattern.
144	
145	Do not install pavement markers over longitudinal or transverse
146	joints of pavement surface, pavement marking tape, and thermoplastic
147	extrusion markings.
148	-
149	(2) Traffic Paint. Use wheeled, manually or motor-propelled
150	applicator machine to apply traffic paint at nominal thickness of 0.015
150	inch or at rate of 300 linear feet of single 4-inch stripe for 1-gallon
151	paint. Use applicator having appropriate shields around nozzles to
152	
	permit sharp stripe definition, and separate nozzle to direct air stream
154	immediately ahead of paint application for clearing debris, dust, and
155	other foreign matter. Immediately remove misted, dripped, and
156	spattered paint from pavements.
157	
158	Protect freshly painted pavement markings from traffic until
159	paint will not transfer to tires or other devices.
160	
161	Repair or correct pavement markings damaged by traffic and
162	paint marks on pavement caused by traffic crossing wet paint.
163	para and para analysis and grades
164	(3) Thermoplastic Extrusion Pavement Marking.
165	(e) mornioplastic Extrasion ravement marking.
165	(a) Equipment. Apply material to pavement by extrusion
167	method. One side of shaping die shall be pavement surface
168	and other three sides shall be contained by, or shall be part of
169	equipment for heating and controlling flow of material.
170	
171	Equipment shall provide continuous mixing and agitation
172	of material. Conveying parts of equipment shall be constructed

173 174	to prevent accumulation and clogging.
174 175 176 177	Mixing and conveying parts, including shaping die, shall maintain material at plastic temperature.
177 178 179 180	Equipment shall produce continuously uniform stripe dimensions.
180 181 182 183 184	Applicator shall cleanly and squarely cut off stripe ends. Pans, aprons, or similar appliances that the die overruns will not be allowed.
184 185 186 187	Apply beads to entire surface of completed stripe by automatic bead dispenser attached to liner.
188 189 190	Equip bead dispenser with automatic cutoff control synchronized with cutoff of thermoplastic material.
191 192 193	Use equipment that provides for varying die widths to produce varying widths of traffic markings.
194 195 196 197 198	Provide kettle for melting and heating composition. Equip kettle with automatic thermoplastic control device so that heating can be done by controlled heat transfer liquid rather than direct flame.
199 200 201	Equip and arrange applicator and kettle in accordance with National Fire Underwriters requirements.
201 202 203 204	Use mobile and maneuverable applicator that is capable of following straight lines and making curves in true arcs.
204 205 206 207	Use applicator capable of containing minimum of 125 pounds of molten material.
208 209 210 211 212	(b) Application. Clean off dirt, blaze, paint, tape, and grease and any material deleterious to the bonding of the thermoplastic extrusion pavement markings. Apply thermoplastic extrusion pavement marking only when pavement surface is dry.
213 214 215 216 217	Use equipment that can apply material in variable widths from 2 inches to 12 inches. Apply material for full width of stripe in one application or pass.
217 218 219	On concrete pavements, on HMA pavements more than seven days old, and on HMA pavements paved within seven

220 days containing less than 6 percent bituminous asphalt, pre-stripe application area with binder material, primer, or prime 221 seal coat or other pre-stripe material recommended by 222 223 pavement marker manufacturer and accepted by Engineer. Elimination of the pre-stripe application shall not be an option. 224 225 226 Line thickness, as viewed from lateral cross section, shall measure not less than 90 mils at edges, and not less than 125 227 mils in center. 228 229 230 Take measurements as average throughout 36-inch sections of line. Two thousand pounds of thermoplastic 231 materials supplied in granular or block form shall yield 232 approximately 6,600 feet of 4-inch striping with 90-mil thickness. 233 234 235 Where required by the contract documents to apply new markings over existing markings, bond new line over old line so 236 that no splitting or separation takes place during its useful life. 237 238 239 Provide finished lines with well-defined edges, free of 240 waviness. 241 242 Profiled Pavement Marking. Profiled thermoplastic (c) 243 marking shall be produced in one continuous integral process consisting of an extruded base line with raised audible bumps 244 245 positioned at regular and predetermined intervals. The product shall be available in standard widths and standard colors of 246 247 white and yellow. 248 249 The thermoplastic material used shall be a maleicmodified glycerol ester resin (Alkyd-based) compound 250 formulated for profiled pavement marking. The pigment, beads, 251 resin and fillers shall be a uniform blend material that must be 252 melted to a temperature of approximately 400 degrees F. 253 254 Maintains a minimum of 380 degrees F when material meets 255 roadway surface. 256 257 The amount of glass beads, yellow pigment and calcium carbonate filler contained in the product shall be at 258 259 manufacturer's option, provided that all other material properties shall comply with requirements of Subsection 755.05 -260 261 Retroreflective Thermoplastic Compound Pavement Markings. 262 The profiled stripe base line shall consist of thermoplastic 263 264 materials extruded to a thickness of not less than 100 mils nor more than 125 mils. The width of the line shall be in 265 accordance with the plans. The edges of the lines shall be well 266

267	defined and free from waviness.
268 269	The raised audible bumps shall stand a minimum of 365
270	mils above the pavement surface. The raised bumps shall be
270	approximately rectangular in shape and positioned at 36-inch
272	intervals when measure center to center. The longitudinal
273	length of the raised bump shall be a minimum of 2-1/2 inches
274	when measured along the crown.
275	
276	(4) Preformed Pavement Marking Tape. Apply temporary or
277	permanent preformed pavement marking tape manually or with tape
278	applicators, in accordance with tape manufacturer's recommendations
279	and the contract documents. Install preformed pavement marking tape
280	only when pavement surface is dry.
281	
282	Do not apply preformed pavement marking tape over other
283	markings. Remove existing pavement markings and prepare surface
284	for tape application in accordance with Subsection 629.03(A) -
285	General.
286	
287	Apply preformed pavement marking tape only when ambient air
288	temperature is at least 60 degrees F and rising, and roadway surface
289	temperature is at least 70 degrees F and rising. Application of
290	preformed pavement marking tape will not be allowed when roadway
291 292	surface temperature exceeds 150 degrees F.
292	Before applying preformed pavement marking tape, prime
293	existing roadway surfaces with primer in accordance with tape
294	manufacturer's recommendations.
296	
290	Use tapes of specified width or use tapes of different widths to
298	form specified stripe width. The Engineer will pay for specified width of
299	stripe when different tape widths are used to form specified width.
300	
301	Use butt splices only. Tape material shall not be overlapped.
302	
303	Areas marked with preformed pavement marking tape shall be
304	ready for traffic immediately after application.
305	
306	(5) Thermoplastic Hot Spray Pavement Marking.
307	
308	(a) Equipment. Use equipment constructed for
309	preparation and application of thermoplastic hot spray
310	pavement marking.
311	

312 313	Equipment shall provide continuous mixing and agitation of material. Conveying parts of equipment shall be constructed
314	to prevent accumulation and clogging.
315	
316	Use applicator capable of containing minimum of 125
317	pounds of molten material.
318	
319	Provide kettle for melting and heating composition.
320	Equip kettle with automatic thermostat control device so that
321	heating can be done by controlled heat transfer liquid rather
322	than direct flame.
323	
324	Equip and arrange applicator and kettle in accordance
325	with National Fire Underwriters requirements.
326	
327	Mixing and conveying parts, including the spray gun,
328	shall maintain material at molten temperature.
329	
330	Apply beads to entire surface of completed stripe by
331	automatic bead dispenser attached to hot spray applicator.
332	
333	Equip bead dispenser with automatic cutoff control
334	synchronized with cutoff of thermoplastic material.
335	
336	Use equipment that provides for varying spray widths to
337	produce varying widths of traffic markings.
338	
339	Use mobile and maneuverable applicator that is capable
340	of following straight lines and making curves in true arcs.
341	
342	(b) Application. Clean off dirt, debris, blaze, paint,
343	tape, and grease. Apply thermoplastic hot spray pavement
344	marking only when pavement surface is dry.
345	
346	Use equipment that can apply material in variable widths
347	from 2 inches to 12 inches. Apply material for full width of
348	stripe in one application or pass.
349	
350	
351	On concrete pavements, on HMA pavements more
352	than seven days old, and on HMA pavements paved within
353	seven days containing less than 6 percent bituminous
354	asphalt, pre-stripe application area with binder material,
355	primer, or prime seal coat recommended by pavement
356	marker manufacturer.
357	

358 Line thickness, as viewed from lateral cross section, shall 359 measure not less than 90 mils at edges, and not less than 125 360 mils in center. 361 362 Where required by the contract documents to apply new markings over existing markings, bond new line over old line so 363 that no splitting or separation takes place during its useful life. 364 365 Provide finished lines with well-defined edges, free of 366 367 waviness. 368 369 (D) **Removal of Existing Pavement Markings.** Completely remove existing pavement markings and dispose of it off the project site before 370 371 performing the following activities: applying temporary or permanent traffic 372 paint, thermoplastic extrusion pavement marking, or preformed pavement 373 marking tape; and making changes in traffic pattern. Dispose of material in 374 accordance with Subsection 201.03(F) - Removal and Disposal of Material. Use one of the following removal methods: 375 376 377 Grinding. Feather edges of grinding to make smooth transition (1) 378 to existing roadway surface. Limit feathering to 3 inches beyond edge of existing striping to be removed. Vary feathered edges to 379 380 differentiate them from traffic stripes. Coat ground asphalt pavement with rapid-setting slurry. 381 382 383 Burning. Burn off existing painted pavement markings using (2) 384 excess oxygen method. 385 386 Sandblasting. As work progresses, immediately remove sand (3) and other material deposited on pavement. 387 388 389 (4) **Hydro-demolition.** Use stripe-removing hydro-demolition 390 machine that has an integrated vacuum to collect water and debris 391 (e.g., Hog Technologies' Stripe Hog series or equal). 392 393 (5) **Other.** Remove preformed pavement marking tape by methods 394 recommended by manufacturers. Eradication of existing markings by 395 painting over them will not be allowed. 396 397 Damaged pavement due to pavement marking removal shall be 398 repaired. Submit remedial repair method to the Engineer for review and 399 acceptance. Repair damaged pavement at no increase in contract price or 400 contract time. 401 402 629.04 Measurement. 403

404 The Engineer will measure thermoplastic and preformed pavement (A) 405 marking tape per linear foot in accordance with the contract documents. The longitudinal pavement markings, including profiled lane markings, will be 406 407 measured per linear foot as a single stripe for the width specified in the contract and in the proposal. The Engineer will include the longitudinal gaps 408 409 for skip striping, up to thirty (30) feet long, in the measurement. 410 411 The Engineer will measure the transverse markings by the linear foot 412 according to the contract. 413 414 The Engineer will not measure temporary pavement markings including 415 flexible delineator posts with reflector makers or Type I Barricades and 416 temporary signs installed for the longitudinal guidance of public traffic over 417 reconstructed areas, cold planed surfaces, newly paved surfaces or other 418 unmarked or scarified areas for payment. 419 420 The Contractor shall consider the work required for the removal of 421 pavement markings incidental to the various contract items, except as 422 provided in the proposal or elsewhere in the contract. 423 424 The Engineer will measure crosswalk markings per lane of traffic 425 marked according to the contract. 426 427 The Engineer will measure pavement arrows (single and multiple 428 heads), symbols, and words per each according to the contract. 429 430 **(B)** The Engineer will measure the pavement markers per each for the 431 types shown in the proposal. 432 433 (C) The Engineer will measure the painted stripes that are twelve (12) 434 inches wide or less as a single stripe. The Engineer will measure the painted 435 stripes over twelve (12) inches wide as two (2) stripes. The Engineer will 436 measure the double stripes that are twelve (12) inches or less in total width 437 including the transverse space between the stripes as a single stripe. 438 439 The Engineer will measure the longitudinal pavement markings by the linear foot according to the contract. Longitudinal gaps for skip striping that 440 441 are 30 feet or less will be included in the measurement. 442 443 The Engineer will measure the transverse markings by the linear foot 444 according to the contract. 445 446 The Engineer will measure crosswalk markings per lane of traffic 447 marked according to the contract. 448 449 The Engineer will measure pavement arrows (single and multiple 450 heads), symbols, and words per each according to the contract.

451 452 The Engineer will measure the painted curb markings by the linear foot 453 according to the contract. 454 455 456 457 458 629.05 Payment. 459 460 The Engineer will pay for thermoplastic and preformed pavement (A) 461 marking tape at the contract price per linear foot according to the contract, 462 complete in place, including primers. 463 464 The Engineer will pay for double four (4) inch striping with a four (4) inch space between stripes at the contract price per linear foot according to 465 the contract. 466 467 468 The Engineer will pay for crosswalk markings at the contract price per 469 lane of traffic marked according to the contract. 470 471 The Engineer will pay for pavement arrows (single and multiple heads). 472 symbols, and words at the contract price per each according to the contract. 473 474 The contract unit price paid shall be full compensation for furnishing 475 labors, materials, tools, equipment and incidentals and for doing the work involved in furnishing and installing pavement markings complete in place 476 according to the contract. 477 478 479 The Engineer will not pay for the temporary pavement markings including flexible delineator posts with reflector markers or Type I Barricades 480 and temporary signs installed for the longitudinal guidance of public traffic 481 over reconstructed areas, cold planed surfaces, newly paved surfaces or 482 483 other unmarked or scarified areas for payment if not shown in the proposal 484 separately. The Engineer will consider them incidental to the various contract items. 485 486 487 The Engineer will pay for the various types of pavement markers at the **(B)** 488 contract price per each according to the contract, complete in place, including 489 adhesives. 490 491 (C) The Engineer will pay for painted pavement striping at the contract price 492 per linear foot according to the contract. 493 494 The Engineer will pay for crosswalk markings at the contract price per 495 lane of traffic marked according to the contract. 496

497 498	The Engineer will pay for pavement arrows (single or heads), symbols, and words at the contract price per each a	
499	contract.	9
500		
501	The Engineer will pay for the accepted quantities of cu	irb markings at
502	the contract price per linear foot according to the contract.	
503		
504	The Engineer will pay for the following pay items when	included in the
